LOCAL REGULATIONS AND STANDARDS

NOISE

Studies have identified noise as an environmental pollutant that can have substantial and permanent impacts on human health and general well-being. Not only is noise a health hazard, excessive noise can be a source of annoyance, tension, and discomfort that disrupts everyday activities. Brea aims to substantially reduce noise and its impacts within the urban environment, with a focus on protecting residential neighborhoods, schools, and similar sensitive uses.

Context

In Brea, street and freeway traffic represent the primary noise sources. Industrial and commercial activity present concerns where adjacent to residential neighborhoods. In addition, mechanical equipment, playgrounds, leaf blowers, and construction equipment are examples of random noise sources that can contribute to neighborhood noise.

Figure PS-5 displays a composite picture of average noise levels in Brea in 2001. As Figure PS-5 illustrates, the loudest noise levels occur along State Highway 57, Imperial Highway, Brea Boulevard, and Valencia Avenue, where truck traffic associated with the Olinda Alpha landfill lingers past homes and places of business. Lambert Road also experiences loud noise levels due to access to State Highway 57.

Noise and Land Use Compatibility Guidelines

Noise generally is defined as unwanted or intrusive sound. Because noise consists of pitch, loudness, and duration, describing noise with a single unit of measure presents a challenge. The A-weighted decibel scale, or dB(A), has been developed to describe the loudness of a sound or sound environment based on the sensitivity of the human ear. A sound level meter that measures A-weighted decibels has an electrical circuit that allows the meter to have the same sensitivity to sound at different frequencies as the average human ear. Table PS-3 indicates criteria the State has established to reduce adverse noise effects on human health.

Figure PS-5
Noise Contours (2001)

Table PS-3
State Criteria for Minimizing Adverse Noise Effects on Humans

Objective	dB(A) Range
Prevent Hearing Loss	75-80
Prevent Physiological Effects (Other than hearing loss)	65-75
Prevent Speech Interference	50-60
Address People's Subjective Preference for Noise Control	45-50
Prevent Sleep Interruption	35-45

Source: California General Plan Guidelines, 2000.

The dB(A) descriptor only reports noise from a single source or combination of sources at a point in time. To allow a more comprehensive description of a noise environment, federal and State agencies have established noise and land use compatibility guidelines that use averaging approaches to noise measurement. Two measurement scales commonly used in California are the Community Noise Equivalent Level (CNEL) and the day-night level (Ldn). To account for increased human sensitivity at night, the CNEL level includes a 5-decibel penalty on noise during the 7:00 A.M. to 10:00 P.M. time period and a 10-decibel penalty on noise during the 10:00 P.M. to 7:00 A.M. time period. The Ldn level includes only the 10 decibel weighting for late-night noise. These values are nearly identical for all but unusual noise sources.

The City will use land use compatibility standards when planning and making development decisions in order to ensure that noise producers do not adversely affect sensitive receptors.

The City's primary goal with regard to community noise is to minimize the exposure of residents to unhealthful or excessive noise levels to the extent possible. To this end, the noise/land use compatibility guidelines in Figure PS-6, based on cumulative noise criteria for outdoor noise, are used to review development proposals and to identify and mitigation measures necessary to avoid or minimize impacts, including traffic noise impacts, a new use may have on established uses.

**Figure PS-6
Noise/Land Use Compatibility**

Land Use Category	Community Noise Equivalent Level (CNEL) or Day-Night Level (Ldn), dB							
	55	60	65	70	75	80	85	
Residential- Low-Density Single-Family, Duplex, Mobile Homes								
Residential- Multiple Family								
Transient Lodging - Motels, Hotels								
Schools, Libraries, Churches, Hospitals, Nursing Homes								
Auditoriums, Concert Halls, Amphitheaters								
Sports Arenas, Outdoor Spectator Sports								
Playgrounds, Neighborhood Parks								
Golf Courses, Riding Stables, Water Recreation, Cemeteries								
Office Buildings, Business, Commercial and Professional								
Industrial, Manufacturing, Utilities, Agriculture								

Nature of the noise environment where the CNEL or Ldn level is:

Below 55 dB

Relatively quiet suburban or urban areas, no arterial streets within 1 block, no freeways within 1/4 mile.

55-65 dB

Most somewhat noisy urban areas, near but not directly adjacent to high volumes of traffic.

65-75 dB

Very noisy urban areas near arterials, freeways or airports.

75+ dB

Extremely noisy urban areas adjacent to freeways or under airport traffic patterns. Hearing damage with constant exposure outdoors.

Normally Acceptable

Specified land use is satisfactory, based on the assumption that any buildings are of normal conventional construction, without any special noise insulation requirements

Conditionally Acceptable

New construction or development should be undertaken only after a detailed analysis of noise reduction requirements is made and needed noise insulation features included in design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning, will normally suffice.

Normally Unacceptable

New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of noise reduction requirements must be made and needed noise insulation features included in design.

Clearly Unacceptable

New construction or development should generally not be undertaken.

The Community Noise Equivalent Level (CNEL) and Day-Night Noise Level (Ldn) are measures of the 24-hour noise environment. They represent the constant A-weighted noise level that would be measured if all the sound energy received over the day were averaged. In order to account for the greater sensitivity of people to noise at night, the CNEL weighting includes a 5-decibel penalty on noise between 7:00 p.m. and 10:00 p.m. and a 10-decibel penalty on noise between 10:00 p.m. and 7:00 a.m. of the next day. The Ldn includes only the 10-decibel weighting for late-night noise events. For practical purposes, the two measures are equivalent for typical urban noise environments.

Noise Contours and Noise Impact Areas

The use of noise contours based on the major noise sources can describe the noise environment for the community. Noise contours outline areas of equal noise exposure. Future noise contours have been estimated using information about existing and projected land use development and transportation activity.

The projected noise contours and noise impact areas for Brea are displayed in Figure PS-7. These contours will serve as a guide for land use and development decisions. Contours of 60 dB(A) or greater define noise impact areas. An acoustical analysis must be prepared when noise sensitive land uses are proposed within noise impact areas. The analysis must show that the project is designed to attenuate noise to meet the City's noise standards in order to receive approval. If the project design does not meet the noise standards, mitigation can be recommended in the analysis. If the analysis demonstrates that the noise standards can be met by implementing the mitigation measures, the project can be approved conditioned upon implementation of the mitigation measures.

Transportation Related Noise

Transportation activity is the primary source of noise in Brea. The three major sources of transportation related noise are:

- Traffic on the Orange Freeway (SR-57)
- Commercial truck traffic associated with the Olinda Alpha landfill on Valencia Avenue and Imperial Highway
- Automobile traffic on Brea Boulevard, Brea Canyon Road, Central Avenue, and Lambert Road

Residential neighborhoods bordering the Orange Freeway are subject to loud noise levels. Properties directly adjacent to the freeway can experience decibels as high as 70 to 75 dB(A). Sound attenuation walls, landscaped buffers, and dirt mounds all help to reduce the sound intensity of the freeway. Figure PS-7 illustrates the projected noise contours along the freeway.

Commercial trucks associated with the Olinda Alpha landfill contribute to excessive noise levels via the Orange Freeway, Imperial Highway, and Valencia Avenue to connect with the landfill. Commercial trucks are not permitted to access Valencia Avenue via Lambert Road, minimizing some of the noise impacts to adjacent residential neighborhoods. Olinda Alpha is slated to close in the year 2013; however, the County of Orange is investigating extending the life of the landfill much further.

New residential development has been recently constructed at the northeast corner of Valencia Avenue and Carbon Canyon Road just south of the Olinda Alpha landfill entrance. Dense planting of deciduous and evergreen trees as well as a sound attenuation wall were set within the landscaped area to minimize the impacts to residential properties directly abutting Valencia Avenue.

Proposed residential land uses have also been designated for both sides of Valencia Avenue south of Lambert Road/Carbon Canyon Road. Residential, school, and park uses are proposed for the Hartley Research Center. Careful planning and mitigation within these areas will protect these sensitive uses from excessive noise levels.

Noise levels along Brea Boulevard, Brea Canyon Road, Central Avenue, and Lambert Road are above average and can impact sensitive uses adjacent to these streets.

Traffic noise depends primarily on the speed of traffic and the percentage of truck traffic. The primary source of noise from automobiles is high-frequency tire noise, which increases with speed. In addition, trucks and older automobiles produce engine and exhaust noise.

The most efficient and effective means of controlling noise from transportation systems is to reduce noise at the source. However, the City has little direct control over noise produced by transportation sources because State noise regulations preempt local regulations. Because the City cannot control noise at the source, City noise programs focus on reducing the impact of transportation noise at reception sites. During the planning stages of the development process, potential impacts from transportation noise will be identified and mitigation measures will be required as needed to meet City noise standards.

Source: Weiland Associates, 2001.

Community Noise Equivalent Level (CNEL) Contours

Legend

Figure PS-6
Future Noise Contours

Sound attenuation walls and limits on speed help to shield residential neighborhoods from automobile noise on Imperial Highway.

Non-Transportation Related Noise

When reviewing a proposed industrial, commercial, or public project, noise generation and potential impacts to surrounding development are considered in accordance with CEQA. Specific attention should be given to non-residential proposals adjacent to residential neighborhoods. An acoustical analysis is required for projects that will generate noise potentially affecting sensitive receptors. Where significant impacts are identified, mitigation measures are required. Common mitigation measures that could be applied when reviewing projects include acoustically treated and quiet design: 1) furnaces, 2) fans, 3) motors, 4) compressors, and 5) valves and pumps. The City may also require limited delivery hours and hours of operation to minimize impacts on adjacent residential users or other sensitive receptors.

Goals and Policies

Certain areas of Brea are subject to high levels of noise. This in turn can reduce the quality of life within these neighborhoods. Consideration of noise sources in the planning process and identification of who that noise impacts is an effective method of minimizing the impacts of noise on residents. Areas already impacted by noise can explore different noise attenuation and rehabilitative improvements.

Goal PS-9	Minimize the impact of point source noise and ambient noise levels throughout the community.
------------------	---

- Policy PS-9.1 Evaluate the need to require acoustical studies for development proposals that address both direct and indirect, particularly traffic, noise impacts, and require such studies, with appropriate mitigation included, as warranted.
- Policy PS-9.2 Ensure that the noise standards set forth in the Municipal Code reflect standards most appropriate for Brea.
- Policy PS-9.3 Ensure that acceptable noise levels are maintained near schools, hospitals, convalescent homes, and other noise sensitive areas in accordance with the City's Municipal Code and noise standards contained in the General Plan.
- Policy PS-9.4 Employ creative methods of reducing noise pollution in the City.
- Policy PS-9.5 Avoid placing high-noise activity centers near residential areas.

Goal PS-2	Minimize the impacts of transportation-related noise.
------------------	--

- Policy PS-2.1 Reduce transportation noise by imposing traffic restrictions where necessary.
- Policy PS-2.2 Work with the counties of Orange and Los Angeles to include noise mitigation measures in the design of new roadway projects.

Goal PS-3	Minimize noise impacts from sources other than transportation.
------------------	---

- Policy PS-3.1 Require the inclusion of noise mitigation measures, techniques, and design features in the planning, design, and construction of future development and redevelopment projects.

- Policy PS-3.2 Require that mixed-use structures be designed to prevent transfer of noise and vibration from commercial/retail to residential use.
- Policy PS-3.3 Minimize stationary noise sources and noise emanating from construction activities and special events.
- Policy PS-3.4 Require that new non-residential development plan delivery areas away from existing residential areas.
- Policy PS-3.5 Continue active enforcement to limit commercial and industrial delivery hours adjoining residential areas.
-

**Implementation
Guide**

See Section XXIII of the Implementation Guide for action programs.

Brea City Code

CHAPTER 8.20: NOISE CONTROL

Section

- 8.20.010 Declaration of policy
- 8.20.020 Definitions
- 8.20.030 Noise level measurement criteria
- 8.20.040 Designated noise zone
- 8.20.050 Exterior noise standards
- 8.20.060 Interior noise standards
- 8.20.070 Special provisions
- 8.20.080 Motor vehicle racing
- 8.20.090 Schools, hospitals and churches
- 8.20.100 Air conditioning; refrigeration; pool filters and fans
- 8.20.110 Noise level measurement
- 8.20.120 Manner of enforcement

§ 8.20.010 DECLARATION OF POLICY.

A. In order to control unnecessary, excessive and annoying sounds emanating from areas of the city, it is hereby declared to be the policy of the city to prohibit such sounds generated from all sources as specified in this chapter.

B. It is determined that certain sound levels are detrimental to the public health, welfare and safety, and contrary to the public interest.

('61 Code, § 7B.1) (Ord. 812, passed - -)

§ 8.20.020 DEFINITIONS.

For the purpose of this chapter, the following definitions shall apply unless the context clearly indicates or requires a different meaning.

AMBIENT NOISE LEVEL. The all-encompassing noise level associated with a given environment, being a composite of sounds from all sources, excluding the alleged offensive noise, at the location and approximate time at which a comparison with the alleged offensive noise is to be made.

CUMULATIVE PERIOD. An additive period of time composed of individual time segments which may be continuous or interrupted.

DECIBEL (dB). A unit which denotes the ratio between two (2) quantities which are proportional to power: the number of decibels corresponding to the ratio or two (2) amounts of power is ten (10) times the logarithm to the base ten (10) of this ratio.

DWELLING UNIT. A single unit providing complete, independent living facilities for one (1) or more persons including permanent provisions for living, sleeping, eating, cooking and sanitation.

EMERGENCY MACHINERY, VEHICLE, OR WORK. Any machinery, vehicle or work used, employed or performed in an effort to protect, provide or restore safe conditions in the community or for the citizenry, or work by private or public utilities when restoring utility service.

FIXED NOISE SOURCE. A stationary device which creates sounds while fixed or motionless, including but not limited to industrial and commercial machinery and equipment, pumps, fans, compressors, generators, air conditioners and refrigeration equipment.

GRADING. Any excavating or filling of earth material, or any combination thereof, conducted at a site to prepare said site for construction or other improvements thereon.

IMPACT NOISE. The noise produced by the collision of one mass in motion with a second mass which may be either in motion or at rest.

MOBILE NOISE SOURCE. Any noise source other than a fixed noise source.

NOISE LEVEL. The “A” weighted sound pressure level in decibels obtained by using a sound level meter at slow response with a reference pressure of twenty (20) micronewtons per square meter. The unit of measurement shall be designated as dB(A).

PERSON. A person, firm, association, co-partnership, joint venture, corporation or any entity, public or private in nature.

RESIDENTIAL PROPERTY. A parcel of real property which is developed and used either in part or in whole for residential purposes, other than transient uses such as hotels and motels.

SIMPLE TONE NOISE. A noise characterized by a predominant frequency or frequencies so that other frequencies cannot be readily distinguished.

SOUND LEVEL METER. An instrument meeting American National Standard Institute's Standard S1.4-1971 for Type 1 or Type 2 sound level meters or an instrument and the associated recording and analyzing equipment which will provide equivalent data.

SOUND PRESSURE LEVEL OF A SOUND, IN DECIBELS. Twenty (20) times the logarithm to the base ten (10) of the ratio of the pressure of the sound to a reference pressure, which reference pressure shall be explicitly stated.

('61 Code, § 7B.2) (Ord. 812, passed - -)

§ 8.20.030 NOISE LEVEL MEASUREMENT CRITERIA.

Any noise level measurements made pursuant to the provisions of this chapter shall be performed using a sound level meter as defined in § 8.20.020.

('61 Code, § 7B.3) (Ord. 812, passed - -)

§ 8.20.040 DESIGNATED NOISE ZONE.

The entire territory of the city is hereby designated as “Noise Zone 1.”

('61 Code, § 7B.4) (Ord. 812, passed - -)

§ 8.20.050 EXTERIOR NOISE STANDARDS.

A. The following noise standards, unless otherwise specifically indicated, shall apply to all residential property within a designated noise zone:

NOISE STANDARDS

<i>Noise Zone</i>	<i>Noise Level</i>	<i>Time Period</i>
--------------------------	---------------------------	---------------------------

1	55 dB(A)	7:00 a.m. - 10:00 p.m.
---	----------	------------------------

1	50 dB(A)	10:00 p.m. - 7:00 a.m.
---	----------	------------------------

In the event the alleged offensive noise consists entirely of impact noise, simple tone noise, speech, music, or any combination thereof, each of the above noise levels shall be reduced by five (5) dB(A).

B. It shall be unlawful for any person at any location within the city to create any noise on property owned, leased, occupied, or otherwise controlled by such person, when the foregoing causes the noise level, when measured on any other residential property, to exceed:

1. The noise standard for a cumulative period of more than 30 minutes in any hour; or

2. The noise standard plus five (5) dB(A) for a cumulative period of more than 15 minutes in any hour; or

3. The noise standard plus ten (10) dB(A) for a cumulative period of more than five (5) minutes in any hour; or

4. The noise standards plus fifteen (15) dB(A) for a cumulative period of more than one (1) minute in any hour; or

5. The noise standard plus twenty (20) dB(A) for any period of time.

C. In the event the ambient noise level exceeds any of the first four (4) noise limit categories above, the cumulative period applicable to said category shall be increased to reflect said ambient noise level. In the event the ambient noise level exceeds the fifth noise limit category, the maximum allowable noise level under said category shall be increased to reflect the maximum ambient noise level.

('61 Code, § 7B.5) (Ord. 812, passed - -)

§ 8.20.060 INTERIOR NOISE STANDARDS.

A. The following interior noise standards, unless otherwise specifically indicated, shall apply to all residential property within a designated noise zone:

INTERIOR NOISE STANDARDS

<i>Noise Zone</i>	<i>Noise Level</i>	<i>Time Period</i>
--------------------------	---------------------------	---------------------------

1	55 dB(A)	7:00 a.m. - 10:00 p.m.
---	----------	------------------------

1	45 dB(A)	10:00 p.m. - 7:00 a.m.
---	----------	------------------------

In the event the alleged offensive noise consists entirely of impact noise, simple tone noise, speech, music, or any combination thereof, each of the above noise levels shall be reduced by five (5) dB(A).

B. It shall be unlawful for any person at any location within the city to create any noise, or to allow the creation of any noise on property owned, leased, occupied, or otherwise controlled by such person, when the foregoing causes the noise level, when measured on any other residential property, to exceed:

1. The interior noise standard for a cumulative period of more than five (5) minutes in any hour; or
2. The interior noise standard plus five (5) dB(A) for a cumulative period of more than one (1) minute in any hour; or
3. The interior noise standard plus ten (10) dB(A) for any period of time.

C. In the event the ambient noise level exceeds any of the first two (2) noise limit categories above, the cumulative period applicable to said category shall be increased to reflect said ambient noise level. In the event the ambient noise level exceeds the third noise limit category the maximum allowable noise level under said category shall be increased to reflect the maximum ambient noise level.

('61 Code, § 7B.6) (Ord. 812, passed - -)

§ 8.20.070 SPECIAL PROVISIONS.

The following activities shall be exempted from the provisions of this chapter:

A. Activities conducted on the grounds of any public nursery, elementary, intermediate or secondary school or college.

B. Outdoor gatherings, public dances and shows, provided said events are conducted pursuant to a permit as required by this code.

C. Activities conducted on any park or playground, provided such park or playground is owned and operated by a public entity.

D. Any mechanical device, apparatus or equipment used, related to or connected with emergency machinery, vehicle or work.

E. Noise sources associated with construction, repair, remodeling, or grading of any real property, provided said activities do not take place between the hours of 7:00 p.m. and 7:00 a.m. on weekdays, including Saturday, or at any time on Sunday or a federal holiday.

F. All mechanical devices, apparatus or equipment which are utilized for the protection or salvage of agricultural crops during periods of potential or actual frost damage or other adverse weather conditions.

G. Mobile noise sources associated with agricultural operations; provided such operations do not take place between the hours of 7:00 p.m. and 7:00 a.m. on weekdays, including Saturday, or at any time on Sunday or a federal holiday.

H. Mobile noise sources associated with agricultural pest control through pesticide application, provided that the application is made in accordance with restricted material permits issued by or regulations enforced by the Agricultural Commissioner.

I. Noise sources, associated with the maintenance of real property, provided said activities take place between 7:00 a.m. and 7:00 p.m. on any day.

J. Any activity to the extent regulation thereof has been preempted by state or federal law.

('61 Code, § 7B.7) (Ord. 812, passed - -)

§ 8.20.080 MOTOR VEHICLE RACING.

It shall be unlawful to conduct motor vehicle racing, testing, timing or similar noise-producing activities at raceways, speedways, off-road vehicle courses, drag strips or other similar places, including, but not limited to, the operation of midget race cars, drag cars, motorcycles, off-road vehicles, and specialty automobiles, between the hours of 11:30 p.m. and 7:00 a.m.

('61 Code, § 7B.8) (Ord. 812, passed - -)

§ 8.20.090 SCHOOLS, HOSPITALS AND CHURCHES.

It shall be unlawful for any person to create any noise which causes the noise level at any school, hospital or church while same is in use to exceed the noise limits as specified in § 8.20.050 proscribed for the assigned noise zone in which the school, hospital or church is located, or which noise level unreasonably interferes with the use of such institutions or which unreasonably disturbs or annoys patients in the hospital, provided conspicuous signs are displayed in three (3) separate locations within one-tenth of a mile of the institution indicating the presence of a school, church or hospital.

('61 Code, § 7B.9) (Ord. 812, passed - -)

§ 8.20.100 AIR CONDITIONING; REFRIGERATION; POOL FILTERS AND FANS.

During the five (5) year period following the effective date of this chapter, the noise standards enumerated in §§ 8.20.050 and 8.20.060 shall be increased eight (8) dB(A) where the alleged offensive noise source is an air conditioning, or refrigeration system, fan, or swimming pool filter, or associated equipment which was installed prior to the effective date of this chapter.

('61 Code, § 7B.10) (Ord. 812, passed - -)

§ 8.20.110 NOISE LEVEL MEASUREMENT.

The location selected for measuring exterior noise levels shall be at any point on the affected property. Interior noise measurements shall be made within the affected dwelling unit. The measurement shall be made at a point at least four (4) feet from the wall, ceiling or floor nearest the alleged offensive noise source and may be made with the windows of the affected unit open.

('61 Code, § 7B.11) (Ord. 812, passed - -)

§ 8.20.120 MANNER OF ENFORCEMENT.

A. The Police Department, the Code Enforcement Officer and their duly authorized representatives are directed to enforce the provisions of this chapter.

B. No person shall interfere with, oppose or resist any authorized person charged with the enforcement of this chapter while such person is engaged in the performance of his or her duty.

('61 Code, § 7B.12) (Ord. 812, passed - -)

[Print](#)

Brea City Code

§ 20.20.040 VIBRATION.

Every use shall be so operated that the ground vibration inherently and recurrently generated does not cause a displacement of the earth greater than .003 of one (1) inch as measured at the property line of the subject use.

(Ord. 425, passed 10-14-68)

Appendix H: Service Provider Response

Appendices

This page intentionally left blank.

**Proposed Brea Mall Redevelopment Project
School District Questionnaire**

Please verify/respond to the following:

1. Are there additional schools that would serve the project site?

Not at this time.

School Enrollment and Capacity

School & Location	Enrollment (10-year average) N/A	Total Capacity
Laurel Elementary School	368 435 magnet program	455
Brea Junior High School	913	1,248
Brea Olinda High School	1,885	2,720
Source: Aldrete 2018.		

2. What is the average enrollment (~~10-year average~~) of each school that would serve the project site?

N/A see above

3. Would these schools would be able to accommodate a potential increase in enrollment from 312 additional residential units?

Laurel would not, it appears that the Middle School and High School would as of this date.

4. What impact will the proposed project, in combination with all the other projects planned in the area, have on the ability of the Brea Olinda Unified School District to provide educational services in the area?

The Magnet Bilingual Program at Laurel would continue, the development would not effect student busing services or meal services at that school.

**Proposed Brea Mall Redevelopment Project
School District Questionnaire**

5. Pursuant to Senate Bill 50, the current statutory school impact fees are as follows:

- Residential – \$3.79/square foot
- Commercial – \$0.61/square foot

Yes, but the SB50 rates are modified every 24 months and the cost impact per square foot for Single family detached homes is \$5.14 and the Multifamily Attached is \$5.48.

6. Please add any comments you may wish to make regarding this matter.

We would like to see the projected number and type of units as well as the square footage per unit type. Are we to assume the project is multifamily units with a total of 149,625 square feet? It is also important to know what the estimated date of completion is so that facilities have sufficient time to be constructed.

Proposed Brea Mall Redevelopment Project Fire Questionnaire

Please verify/respond to the following:

1. Please list any additional stations that would respond to the site:

Fire Stations and Equipment Serving the Project Site

Station	Address	Equipment
City of Brea Fire Department		
Brea Fire Department – Station #1	555 North Berry Street, Brea	Type 1 – Advanced Life Support, 4 personnel
Brea Fire Department – Station #2	200 North Brea Boulevard, Brea	Pierce/tiller – Advanced Life Support, 4 personnel
Fullerton Fire Department		
Fullerton Fire Department – Station #4	3251 North Harbor Boulevard, Fullerton	Type 1 – Advanced Life Support, 4 personnel
Los Angeles County Fire Department		
LACFD – Station 191	850 West La Habra Boulevard, La Habra	2 paramedics
LACFD – Station 192	520 South Harbor Boulevard, La Habra	Type 1 – Advanced Life Support, 3 personnel
LACFD – Station 193	1000 West Risner Way, La Habra	Type 1 – Advanced Life Support, 3 personnel

2. What is the approximate fire flow requirement for the proposed project? **Fire flow is determined by construction type and total square footage of the structure. It will vary and reduction in fire flow could occur due to the factors previously mentioned. At this time the fire flow is 8,000 gpm for a duration of 4 hours. If existing fire hydrants do not provide the required fire flow, then improvements will be made to meet the minimum requirement.**
3. The Department's standard is 6 minutes to first arriving unit on scene. What is the average response time to the project site? **Approximately 5 minutes.**
4. Are there any existing deficiencies in the level of fire protection service currently provided to the area including and surrounding the project site? **No existing deficiencies exist at this time.**
5. Would this project have a significant impact on the ability to maintain adequate level of fire protection service to the area? **No significant impact at this time.**

**Proposed Brea Mall Redevelopment Project
Fire Questionnaire**

6. What conditions will the Fire Department require or recommended to reduce fire hazards and reduce potential impacts on fire service? [The new structures will be fully protected as required by the California Fire and Building Codes, City ordinances and the applicable national standards. The following fire protection systems will be required: automatic fire sprinkler system, automatic fire alarm system, a fire pump, and an emergency responder radio coverage system. Fire apparatus access roads will also be provided to ensure adequate accessibility to the new structures.](#)
7. Please add any other comments you may wish to make regarding this project.

Proposed Brea Mall Redevelopment Project Police Questionnaire

Please verify/respond to the following:

1. Please confirm the following station responds to calls from the project site:
 - a. The Brea Police Station is located at 1 Civic Center Circle, Brea. Police patrol units work in the field and may be responding from other locations from throughout the city.
2. Please indicate the type of service calls or service demands anticipated by the proposed uses (mall and residential).

a. If the development is more of an expansion of the typical retail and food establishments (with limited or no alcohol sold) currently at the mall, service calls are expected to increase. Standard calls for service include but not limited to theft (shoplifting), burglary, robbery and an occasional assault. In addition, the apartment development located on the mall property will increase calls for service including but not limited to domestic disturbances, noise complaints, suspicious persons/vehicles, burglary/theft investigations as well as traffic/parking complaints.

b. If the mall expansion includes more of a night life atmosphere with restaurants including bars (such as BJ's/Yard House/Cheesecake Factor), with coffee houses and some type of night entertainment, there is an expectation of an increase of service calls similar to the type the police department experiences in the Downtown. Those types of calls are disturbances, alcohol related disturbances, suspicious persons/vehicles, burglary/theft investigations and minor assault incidents.

The exact impact of the Mall expansion will not be known until the Mall expansion has been fully completed and the businesses are operating/apartments occupied.

3. Given the existing level of staffing and equipment, will the police department be able to provide police services to the proposed project? If not, please indicate what will be required to serve the project.

The increase in retail stores as well as outside venue will increase calls for service. Depending upon retail stores, outside entertainment and the types of restaurants which open in the area, there will be an increase service needs from the police department. In addition the apartment development will increase calls for service. The expansion of service needs should be evaluated for increasing police officer strength along with increased resources & equipment.

4. What impact will the proposed project, in combination with all the other projects planned in the area, have on the ability of the police department to provide police services in the area?

The "Core" area of Brea is currently seeing significant development, and a combination of all the developments (Mall/Hines/hotel/Imperial Shopping Center/etc.), all will increase calls for service which will impact the Police Department's ability to service

**Proposed Brea Mall Redevelopment Project
Police Questionnaire**

the already established parts of the city. A current staffing needs assessment is being conducted and may provide a clearer understanding of specific Police Department needs.

5. What conditions will the Police Department require or recommended to reduce safety hazards and reduce potential impacts on police service?

Increase integration with onsite private security with the police department in communications (video access), as well as ability to access locked common areas (knox box keys) for emergency response. Verified Police/Fire radio reception in enclosed areas of the Mall.

6. Please add any comments you may wish to make regarding this matter.

With the Mall development as well as the other projects in the area (Hines/hotel/Imperial Shopping Center/etc.) traffic will be increased in the area to some unknown degree. I do not see any increased traffic lanes, traffic measures being implemented and there may be a need for funds to assist in traffic mitigation measures for this project.

TRAFFIC IMPACT ANALYSIS REPORT
BREA MALL MIXED USE PROJECT

Brea, California
January 9, 2020

1.0 INTRODUCTION

This Traffic Impact Analysis report addresses the potential traffic impacts and circulation needs associated with Brea Mall Mixed Use Project (hereinafter referred to as Project) in the City of Brea. The Project consists of redevelopment of 17.5-acre in the southwest portion of the Brea Mall property that includes the Sears parcel and adjoining transition areas adjacent to Nordstrom and Macy's. The Project involves demolishing 161,990 square-foot (SF) of the Sears department store and associated auto center and roughly 12 acres of surface parking in order to development 183,615 SF of new retail space, a 128,000 SF health club, and a 312-unit seven-story apartment building. The proposed Project is located west of the State Route (SR) 57 Freeway and is generally bounded by State College Boulevard to the east, Imperial Highway (State Route 91) to the south, Randolph Avenue to the west, and Birch Street to the north. The Project is expected to be developed in several phases with the Year 2022 utilized to assess the Project's potential traffic impacts at full occupancy within a near-term cumulative traffic setting.

1.1 Scope of Work

This traffic report documents the findings and recommendations of a traffic impact analysis conducted by Linscott, Law & Greenspan, Engineers (LLG) to determine the potential impacts associated with the proposed Project. The traffic analysis evaluates the existing operating conditions at twenty-nine (29) key study intersections within the project vicinity, estimates the trip generation potential of the proposed Project, and forecasts future near-term (Year 2022) and long-term (Year 2040) operating conditions without and with the proposed Project. Where necessary, intersection improvements/mitigation measures are identified.

This traffic report satisfies the traffic impact requirements of the City of Brea and is consistent with the current *Congestion Management Program (CMP) for Orange County*. The Scope of Work for this traffic study is included in **Appendix A** and was developed in conjunction with City of Brea Public Works Department staff and in consideration of comments of Caltrans staff.

The project site has been visited and an inventory of adjacent area roadways and intersections was performed. Existing weekday peak hour and Weekend (Saturday) Midday peak hour traffic count information has been collected at twenty-nine (29) key study intersections for use in the preparation of intersection level of service calculations. Information concerning cumulative projects (planned and/or approved) in the vicinity of the proposed Project has been researched at the Cities of Brea, Fullerton, La Habra and Placentia. Based on our research, there are five (5) related projects in the City of Brea and one (1) related project in the City of Fullerton. The six (6) related projects, as vetted with City staff, were considered in the near-term cumulative traffic analysis for this project.

This traffic report analyzes existing and future weekday daily, AM peak hour and PM peak hour and weekend (Saturday) midday peak hour traffic conditions for a near-term (Year 2022) and long-term (Year 2040) traffic setting upon completion of the proposed Project. Near-term (Year 2022) cumulative daily and peak hour traffic forecasts were projected by incorporating a one percent (1.0%) annual growth rate and the trip generation potential of six (6) related projects. Long-term (Year 2040) daily and peak hour traffic forecasts were projected based on modeled traffic projections prepared by OCTA utilizing the OCTAM 4.0 Year 2040 Model.

1.2 Study Area

Twenty-nine (29) key study intersections have been identified for evaluation in collaboration with City of Brea staff. The twenty-nine (29) intersections listed below provide regional and local access to the study area and define the extent of the boundaries for this traffic impact investigation, as well as identifies the governing jurisdiction whose criteria have been applied to that intersection. It should be noted that cities that border the intersection but do not have governing jurisdictions are included in parentheses.

Key Intersection	Applicable Jurisdiction (City Location)				
	Caltrans	City of Brea	City of La Habra	City of Fullerton	City of Placentia

24. Castlegate Ln/Placentia Ave at Imperial Hwy	Caltrans	(Brea)	--	--	--
25. Kraemer Boulevard at Imperial Highway	Caltrans	(Brea)	--	--	--

¹ Orange County Congestion Management Program (CMP) intersection.

Key Intersection	Applicable Jurisdiction (City Location)				
	Caltrans	City of Brea	City of La Habra	City of Fullerton	City of Placentia
26. Brea Boulevard at Bastanchury Road	--	--	--	Fullerton	--
27. State College Boulevard at Bastanchury Road	--	--	--	Fullerton	--
28. Placentia Avenue at Bastanchury Road	--	--	--	--	Placentia
29. Kraemer Boulevard at Bastanchury Road	--	--	--	--	Placentia

Of the study intersections, the following four (4) intersections are CMP intersections:

<u>Study Intersection</u>	<u>Location</u>
16	Harbor Boulevard at Imperial Highway
20	State College Boulevard at Imperial Highway
21	SR-57 SB Ramps at Imperial Highway
22	SR-57 NB Ramps at Imperial Highway

Figure 1-1 presents a Vicinity Map, which illustrates the general location of the Project and depicts the study locations and surrounding street system. The Level of Service (LOS) investigations at these key locations were used to evaluate the potential traffic-related impacts associated with area growth, cumulative projects and the proposed Project. When necessary, this report recommends intersection and/or roadway improvements that may be required to accommodate future traffic volumes and restore/maintain an acceptable Level of Service, and/or mitigates the impact of the project. Included in this Traffic Impact Analysis are:

- Existing traffic counts,
- Estimated project traffic generation/distribution/assignment,
- Estimated cumulative project traffic generation/distribution/assignment,
- Weekday AM and PM peak hour and Weekend (Saturday) Midday peak hour capacity analyses for existing conditions,
- Weekday AM and PM peak hour and Weekend (Saturday) Midday peak hour capacity analyses for existing plus project conditions,
- Weekday AM and PM peak hour and Weekend (Saturday) Midday peak hour capacity analyses for future near-term (Year 2022) traffic conditions without and with the proposed Project,
- Weekday AM and PM peak hour and Weekend (Saturday) Midday peak hour capacity analyses for future long-term (Year 2040) traffic conditions without and with the proposed Project,
- Site Access Evaluation,
- Congestion Management Program Compliance Assessment, and
- Caltrans Basic Freeway Segment Analysis.

Traffic impact analyses are typically focused on evaluating traffic operations during the morning and evening commute peak hours (7:00 to 9:00 AM, and 4:00 to 6:00 PM) on a typical weekday because these are generally when the busiest traffic conditions occur. As a conservative measure in assessing potential traffic impacts of the Project, Saturday midday conditions were also analyzed (with the peak expected to occur between 11:00 AM and 3:00 PM).

- # = PROJECT SITE

FIGURE 1-1

VICINITY MAP

BREA MALL MIXED-USE PROJECT, BREA

This analysis is also consistent with the traffic impact study requirements of the most current *Orange County Congestion Management Program* (CMP). The CMP specifies the following two thresholds for formulating the study scope of a CMP-based evaluation:

- **To determine whether a development project requires a CMP traffic impact analysis:**
The CMP requires that a traffic impact analysis be conducted for any project generating 2,400 or more daily trips (this threshold is reduced to 1,600 or more daily trips if the project will have direct access to a CMP link).
- **To identify which CMP intersections and/or roadway segments (i.e. arterials and freeway mainline segments) will need to be evaluated for project impacts:**
The CMP-based traffic impact analysis should include any CMP intersections and/or roadway segments where the development project could add trips corresponding to 3% or more of existing capacity (i.e., LOS E).

It should be noted that the two thresholds described above are intended for establishing the CMP-based study scope and are not the CMP's criteria for determining significant traffic impacts of a development project. Per the CMP, a significant impact is identified if the project causes the CMP facility to operate worse than LOS E, and increases the ICU value by more than 0.10 if the CMP facility operates at LOS F without the project.

Based on the application of the CMP scoping requirements to the proposed Project, the CMP study thresholds were exceeded by the Project's trip making potential (project trip generation is further discussed in Section 5.0 of this report); therefore, CMP intersections were analyzed by applying the CMP methodology.

2.0 PROJECT DESCRIPTION

The Brea Mall is an existing regional shopping center that is located on approximately 74 acres of land in the City of Brea in northeast Orange County. The Brea Mall is located west of the State Route 57 (SR-57) Freeway and is generally bound by State College Boulevard to the east, Imperial Highway (State Route 91) to the south, Randolph Avenue to the west, and Birch Street to the north. *Figure 2-1* is an existing aerial photograph of the Brea Mall.

2.1 Existing Brea Mall

The existing Brea Mall currently encompasses 1,291,433 square feet (SF) of Gross Leasable Area (GLA), of which 1,210,438 SF of GLA is now occupied, and consists of several major department stores and a central core of a mixture of retail shops and restaurant/food uses. Surrounding the retail core are several free-standing retail structures along the Brea Mall Circle, including the Olive Garden, Red Lobster, The Cheesecake Factory, and BJ's Restaurant.

As with any regional shopping center, the mall experiences periodic transitions in tenants and occupancy. The Sears department store, which is designated for demolition, was vacated in April 2018. However, currently first floor of the Sears department store has been re-occupied by Q's fashion retail store; the second floor of the Sears department store is currently still vacant.

As the above-described vacant space was not occupied on the dates that traffic counts were conducted for this study (i.e., weekday AM and PM peak period counts and Saturday midday peak period counts), and to account for trips corresponding with the mall's entitled and historically occupied square footage, trip generation for the 80,995 SF of vacant GLA was estimated based on the application of ITE rates/equations, and resulting trips were then assigned and added to the raw traffic counts collected at study intersections.

2.2 Proposed Project

The proposed Project consists of the redevelopment of 17.5-acres in the southwest portion of the Brea Mall property that includes the Sears parcel and adjoining transition areas adjacent to Nordstrom and Macy's. The proposed Project involves demolishing the former 161,990 SF Sears department store and associated auto center and 12 acres of surface parking to allow for the development of a mix of uses including retail, for-rent residential apartment, a resort-type fitness center, and a public gathering space (large "central green" and plaza).

Based on a review of the description and site plan of the retail component of the Project, up to 183,615 SF of additional retail space, inclusive of a 50,019 SF sporting goods store and a 128,000 SF health club will be constructed. The residential component of the proposed Project, which would be developed south of the Nordstrom's parking structure, includes the development of a seven-story apartment podium with up to 312 apartment homes consisting of 35 studio units, 162 one-bedroom units, and 115 two-bedroom units "wrapped" around a seven-level parking structure with a total of 538 spaces.

Table 2-1 provides the Project development summary. A review of **Table 2-1** indicates that upon completion of the Project, Brea Mall will have total GLA of 1,441,058 SF and a 312 unit apartment community. **Figure 2-2** illustrates the conceptual site plan for the retail component of the Project prepared by 5o5 Design. **Figure 2-3** illustrates the conceptual site plan for the residential component of the Project prepared by Architects Orange.

2.3 Vehicular Site Access

The Brea Mall can be accessed from three of the four surrounding streets bordering the subject property, State College Boulevard, Randolph Avenue, and Birch Street; no vehicular access is provided from Imperial Highway. Vehicular access from Randolph Avenue is currently provided by two (2) signalized intersections, whereas one (1) signalized access is provided along Birch Street. From State College Boulevard, three (3) signalized intersections provide access to the Brea Mall. No change in access to the Brea Mall is proposed as a part of the Project. Since the Project is focused to the southwest portion of the Brea Mall property the southernmost driveways along Randolph Avenue and State College Boulevard are anticipated to be the focus of Project related trips.

2.4 Pedestrian and Bicycle Circulation

Brea Mall is surrounded by other commercial and public facilities and walkability between these properties as well as from existing and future residential uses is facilitated by existing sidewalks, traffic signals at intersections that immediately border the property and crosswalks. Review of current conditions indicates that pedestrian connectivity between the mall and adjacent uses are provided via the existing sidewalk system and internal pedestrian pathways. Sidewalks are generally provided throughout the City along with crosswalks at most major intersections, and in particular sidewalks are provided along State College Boulevard, Birch Street, Randolph Avenue, and Imperial Highway bordering the site. Further, at each of the six (6) signalized intersections that provide access to the Brea Mall, crosswalks are provided to provide connectivity across the streets that border the site. With the current pedestrian system now in place, access to and from the mall is adequate and will continue to serve the existing development as well as the proposed Project.

In addition to the pedestrian connectivity, the General Plan identifies future Class II bike lanes along Birch Street and State College Boulevard adjacent to the Brea Mall. These future bikeway additions will help improve mobility and direct connection to the surrounding facilities. To provide connectivity to the Class II bike lanes on Birch Street and State College Boulevard, Class II bike lanes and/or Sharrow bike lanes are proposed on the “ring road” and the signalized entries of the Brea Mall as a part of the Project. **Figure 2-4** illustrates the conceptual bikeway plan of the Project prepared by raSmith.

TABLE 2-1

PROJECT DEVELOPMENT SUMMARY

Land Use/Project Description	Development Totals
<u>Existing Occupied Brea Mall:</u>	
▪ Existing Occupied Mall ²	1,210,438 SF GLA
<u>Existing Occupied Brea Mall + Vacancy:</u>	
▪ Existing Occupied Mall	1,210,438 SF GLA
▪ Vacant Second Story Sears Tenant ³	<u>80,995 SF GLA</u>
<i>Fully Occupied Brea Mall</i>	<i>1,291,433 SF GLA</i>
<u>Existing Occupied Brea Mall + Proposed Project:</u>	
▪ Existing Occupied Mall	1,210,438 SF GLA
▪ Existing Occupied Mall to be Demolished	-80,995 SF GLA
▪ Proposed Project Commercial	
o Sporting Goods ⁴	50,019 SF GLA
o Fitness Center ²	128,000 SF GLA
o Level 1 Mall	123,053 SF GLA
o Level 2 Mall ⁴	<u>10,543 SF GLA</u>
<i>Existing Occupied Brea Mall + Proposed Project Subtotal</i>	<i>1,441,058 SF GLA</i>
▪ Proposed Project Multifamily Homes ⁵	
o Studio	35 Units
o 1 Bedroom	162 Units
o 2 Bedroom	<u>115 Units</u>
<i>Proposed Residential</i>	<i>312 Units</i>

² Table 1, *Brea Mall Redevelopment Project Land Use Summary*, received May 1, 2019, indicates that the existing occupied mall as 1,291,433 SF. 80,995 SF (first story of 161,990 SF Sears tenant) has since been reoccupied by Q's fashion retail store for an existing occupied mall of 1,210,438 SF.

³ As the lower level of the 161,990 SF Sears tenant has been reoccupied, 80,995 SF of the upper level remains vacant.

⁴ 5o5 Design site plan, dated June 10, 2019.

FIGURE 2-4

CONCEPTUAL BIKEWAY PLAN
BREA MALL MIXED-USE PROJECT, BREA

3.0 EXISTING CONDITIONS

3.1 Existing Street System

The principal local network of streets serving the project site includes Lambert Road, Birch Street, Imperial Highway, Brea Boulevard, and State College Boulevard. The following discussion provides a brief synopsis of these key area streets. The descriptions are based on an inventory of existing roadway conditions.

Lambert Road is a six-lane, divided roadway west of Kraemer Boulevard and a four-lane, divided roadway east of Kraemer Boulevard, oriented in the east-west direction. The posted speed limit on Lambert Road is 45 miles per hour (mph) west of SR-57 Freeway and 50 miles per hour (mph) east of SR-57 Freeway. On-street parking is not permitted along this roadway. Traffic signals control the study intersections of Lambert Road at Puente Street, Brea Boulevard, State College Boulevard, SR-57 SB Ramps, SR-57 NB Ramps, and Santa Fe Road/Kraemer Boulevard. Lambert Road is designated as a Major Arterial in the City's Master Plan of Roadways.

Birch Street is a four-lane, divided roadway oriented in the east-west direction that borders the Brea Mall on the north. The posted speed limit on Birch Street is 50 miles per hour (mph). On-street parking is not permitted along this roadway. Traffic signals control the study intersections of Birch Street at Brea Boulevard, Randolph Avenue, State College Boulevard, S Associated Road, N Associated Road, and Kraemer Boulevard. Birch Street Road is designated as a Primary Arterial in the City's Master Plan of Roadways.

Imperial Highway is a six-lane, divided roadway generally oriented in the east-west direction. The posted speed limit on Imperial Highway is 45 miles per hour (mph) west of the SR-57 Freeway and 50 miles per hour (mph) east of the SR-57 Freeway. On-street parking is not permitted along this roadway. A traffic signal controls the study intersections of Imperial Highway at Harbor Boulevard, Puente Street, Brea Boulevard, Randolph Avenue, State College Boulevard, SR-57 SB Ramps, SR-57 NB Ramps, Associated Road, Placentia Avenue, and Kraemer Boulevard. Imperial Highway is designated as a Smart Street in the City's Master Plan of Roadways.

Brea Boulevard is a four-lane, divided roadway generally oriented in the north-south direction. The posted speed limit on Brea Boulevard is 40 miles per hour (mph) south of Imperial Highway and 35 miles per hour (mph) north of Imperial Highway. On-street parking is not permitted along this roadway. A traffic signal controls the study intersections of Brea Boulevard at Bastanchury Road, Imperial Highway, Birch Street, and Lambert Road. Brea Boulevard is designated as a Primary Arterial in the City's Master Plan of Roadways.

State College Boulevard is a four-lane, divided roadway generally oriented in the north-south direction that borders the Brea Mall on the east. The posted speed limit on State College Boulevard is 40 miles per hour (mph). On-street parking is not permitted along this roadway. A traffic signal controls the study intersections of State College Boulevard at Bastanchury Road, Imperial Highway, Birch Street, and Lambert Road. State College Boulevard is designated as a Primary Arterial in the City's Master Plan of Roadways.

Randolph Avenue is a four-lane, divided roadway oriented in the north-south direction that borders the Brea Mall on the west. The posted speed limit on Randolph Avenue is 40 miles per hour (mph). On-street parking is not permitted along this roadway. Traffic signals control the study intersections of Randolph Avenue at Madison Way/Brea Mall and Brea Mall.

Figure 3-1 presents an inventory of the existing roadway conditions for the arterials and intersections evaluated in this report. This figure identifies the number of travel lanes for key arterials, as well as intersection configurations and controls for the key area study intersections.

3.2 Existing Public Transit

Public transit bus service is provided in the project area by the Orange County Transportation Authority (OCTA). Within the subject property, the Brea Transit Center is Five (5) OCTA bus routes operate within the vicinity of the Project site on Birch Street and State College Boulevard, which consist of the following:

- OCTA Route 57 (Brea to Newport Beach): Route 57 is a local bus route serving the Cities of Brea, Fullerton, Anaheim, Orange, Santa Ana, Costa Mesa, and Newport Beach. The major routes of travel include State College Boulevard and Bristol Street. Nearest to the project site are bus stops along State College Boulevard at the intersections of Imperial Highway and Birch Street. Route 57 operates on approximate 15-minute headways during weekdays and 30-minute headways on weekends. The Brea Mall Transit Center is served by this bus route.
- OCTA Route 129 (La Habra to Anaheim): Route 129 is a community bus route serving the Cities of Anaheim, Placentia, Yorba Linda, Brea, and La Habra. The major routes of travel include La Habra Boulevard, Brea Boulevard, Birch Street, and Kraemer Boulevard. Nearest to the project site are bus stops along Brea Boulevard at the intersection of Birch Street. Route 129 operates on approximate 30-minute headways during weekdays and 60-minute headways on weekends. The Brea Mall Transit Center is served by this bus route.
- OCTA Route 143 (La Habra to Brea): Route 143 is a community bus route serving the Cities of Fullerton, Brea, and La Habra. The major routes of travel include Whittier Boulevard, Harbor Boulevard, Brea Boulevard, and Birch Street. Nearest to the project site are bus stops on Brea Boulevard at Imperial Highway, Birch Street at Randolph Avenue, Birch Street at State College Boulevard, and at Brea Mall. Route 143 operates on approximate 75-minute headways during weekdays and 65-minute headways on weekends. The Brea Mall area is served by this bus route.
- OCTA Route 153 (Brea to Anaheim): Route 153 is a community bus route serving the Cities of Brea, Placentia, Fullerton, Anaheim, and Orange. The major routes of travel include Placentia Avenue. Nearest to the project site are bus stops on Birch Street at the intersection with State College Boulevard. Route 153 operates on approximate 60-minute headways during weekdays and weekends. The Brea Mall Transit Center is served by this bus route.
- OCTA Route 213 (Brea to Irvine Express). Route 213 is an express bus route serving the Cities of Brea, Placentia, Fullerton, Anaheim, Orange, Tustin, Santa Ana, and Irvine via the SR-55 Freeway. Nearest to the project site are bus stops on Brea Boulevard at the intersection with Birch Street. Route 213 operates on approximate 30-minute headways during weekday peak

FIGURE 3-1B

**EXISTING ROADWAY CONDITIONS
AND INTERSECTION CONTROLS**

BREA MALL EXPANSION, BREA

hours; no bus service is provided on the weekends. The Brea Mall Transit Center is served by this bus route.

Figure 3-2 graphically illustrates the transit routes of OCTA within the vicinity of the Project site. **Figure 3-3** graphically illustrates the directional transit routes of OCTA within the Brea Mall site. **Figure 3-4** identifies the location of the existing bus stops in proximity to the Project site.

As shown in *Figure 3-3*, access to public transit is provided via bus stops along Birch Street and State College Boulevard, inclusive of the site's signalized intersections. Further a transit center/hub is located within the existing Brea Mall site and is served by four (4) OCTA bus routes.

3.3 Existing Bikeway Plan

The City of Brea promotes bicycling as a means of mobility and a way in which to improve the quality of life within its community. The Bikeway Plan recognizes the needs of bicycle users and aims to create a complete and safe bicycle network throughout the City. The City of Brea Bike Plan (existing and proposed) is shown on **Figure 3-5**. In close proximity to the site, an existing Class II bike lane is provided along Birch Street, from just west of State College Boulevard to the east, east of SR-57 Freeway and State College Boulevard, north of Birch Street. The Tracks at Brea, which are separated east/west Class I bikeway facility, is located on block to the north of the Brea Mall. There is a proposed Class II bike lane along Birch Street to the west and along State College Boulevard to the south.

3.4 Existing Traffic Volumes

Twenty-nine (29) key study intersections and twenty-three (23) roadway segments have been identified as the locations at which to evaluate existing and future traffic operating conditions. Some portion of potential project-related traffic will pass through each of these intersections, and their analysis will reveal the expected relative impacts of the project. These key locations were selected for evaluation based on discussions with City of Brea staff and in consideration of Orange County CMP requirements.

Existing weekday daily, AM peak hour and PM peak hour and weekend daily and Midday peak hour traffic volumes for the twenty-nine (29) key study intersections and twenty-three (23) roadway segments were obtained from manual turning movement counts conducted by National Data and Surveying Services in 2018 or 2019. The 2018 count locations have been grown by 1% for a baseline Year 2019 traffic condition.

As discussed previously, approximately 80,995 SF GLA of mall space was not occupied on the dates that traffic counts were conducted. To address this, and to account for trips corresponding with the mall's entitled and historically occupied square footage, trip generation for this floor area was estimated based on the application of ITE rates/equations, and resulting trips were then assigned to the street system and added to the raw traffic counts collected at the key intersections.

Figures 3-6 and **3-7** illustrate the existing weekday AM and PM peak hour traffic volumes at the twenty-nine (29) key study intersections evaluated in this report, respectively. **Figure 3-7** also

presents the existing average weekday daily traffic volumes for the twenty-three (23) roadway segments in the vicinity of the proposed Project.

Figure 3-8 illustrates the existing weekend (Saturday) Midday peak hour traffic volumes at the twenty-nine (29) key study intersections evaluated in this report, respectively. **Figure 3-8** also presents the existing average weekend daily traffic volumes for the twenty-three (23) roadway segments in the vicinity of the proposed Project.

Appendix B contains the detailed peak hour and daily traffic count sheets for the key intersections and roadway segments evaluated in this report.

3.5 Level Of Service (LOS) Analysis Methodologies

Existing weekday AM and PM peak hour and Weekend (Saturday) Midday peak hour operating conditions for the twenty-nine (29) key study intersections were evaluated using the *Intersection Capacity Utilization (ICU)* methodology for signalized intersections as well as the methodology outlined in the *Highway Capacity Manual*. Per the City's direction, the Intersection Capacity Utilization (ICU) method will be used for the purpose of consistency with the General Plan. The Highway Capacity Manual (HCM) method will be used for the key study intersections under Brea and/or Caltrans jurisdiction for the purpose of providing an additional layer of analysis.

3.5.1 Intersection Capacity Utilization (ICU) Method of Analysis

In conformance with City of Brea and Orange County CMP requirements, existing weekday AM and PM peak hour and Weekend (Saturday) Midday peak hour operating conditions for the key signalized study intersections were evaluated using the Intersection Capacity Utilization (ICU) method. The ICU technique is intended for signalized intersection analysis and estimates the volume to capacity (V/C) relationship for an intersection based on the individual V/C ratios for key conflicting traffic movements. The ICU numerical value represents the percent signal (green) time, and thus capacity, required by existing and/or future traffic. It should be noted that the ICU methodology assumes uniform traffic distribution per intersection approach lane and optimal signal timing. It is noted that the two (2) study intersections within the City of Fullerton jurisdiction (Intersections No. 26 and 27) were evaluated using the HCM methodology only per their criteria and has been omitted from the ICU tables.

Per City of Brea, City of La Habra, and City of Placentia requirements, the ICU calculations use a lane capacity of 1,700 vehicles per hour (vph) for through and all turn lanes. A clearance adjustment factor of 0.05 was added to each Level of Service calculation.

The ICU value translates to a Level of Service (LOS) estimate, which is a relative measure of the intersection performance. The ICU value is the sum of the critical volume to capacity ratios at an intersection; it is not intended to be indicative of the LOS of each of the individual turning movements. The six qualitative categories of Level of Service have been defined along with the corresponding ICU value range and are shown in **Table 3-1**.

BREA MALL MIXED-USE PROJECT, BREA

3.5.2 Highway Capacity Manual (HCM) Method of Analysis (Signalized Intersections)

Existing weekday AM and PM peak hour and Weekend (Saturday) Midday peak hour operating conditions for key study intersections under City of Brea, City of Fullerton and/or Caltrans jurisdiction were evaluated using the methodology outlined in *Chapter 19 of the Highway Capacity Manual 6 (HCM 6)* for signalized intersections, the methodology outlined in *Chapter 20 of the HCM 6* for two-way stop-controlled intersections. It is noted that the two (2) study intersections within the City of Placentia jurisdiction (Intersections No. 28 and 29) were evaluated using the ICU methodology only per their criteria and has been omitted from the HMC tables.

Based on the HCM operations method of analysis, level of service for signalized intersections and approaches is defined in terms of control delay, which is a measure of the increase in travel time due to traffic signal control, driver discomfort, and fuel consumption. Control delay includes the delay associated with vehicles slowing in advance of an intersection, the time spent stopped on an intersection approach, the time spent as vehicles move up in the queue, and the time needed for vehicles to accelerate to their desired speed. LOS criteria for traffic signals are stated in terms of the control delay in seconds per vehicle. The LOS thresholds established for the automobile mode at a signalized intersection are shown in **Table 3-2**.

3.5.3 Highway Capacity Manual (HCM) Method of Analysis (Unsignalized Intersections)

The HCM unsignalized methodology for stop-controlled intersections was utilized for the analysis of the unsignalized intersections. LOS criteria for unsignalized intersections differ from LOS criteria for signalized intersections as signalized intersections are designed for heavier traffic and therefore a greater delay. Unsignalized intersections are also associated with more uncertainty for users, as delays are less predictable, which can reduce users' delay tolerance.

Two-way stop-controlled intersections are comprised of a major street, which is uncontrolled, and a minor street, which is controlled by stop signs. Level of service for a two-way stop-controlled intersection is determined by the computed or measured control delay. The control delay by movement, by approach, and for the intersection as a whole is estimated by the computed capacity for each movement. LOS is determined for each minor-street movement (or shared movement) as well as major-street left turns. The worst side street approach delay is reported. LOS is not defined for the intersection as a whole or for major-street approaches, as it is assumed that major-street through vehicles experience zero delay. The HCM control delay value range for two-way stop-controlled intersections is shown in **Table 3-3**.

3.5.4 Basic Freeway Segments

The basic freeway segment criteria are based on peak hour *HCM 6* density analysis. The capacities are based on information contained in the *HCM 6*. Existing traffic count data for the analyzed freeway segments was obtained from the Caltrans website.

Basic freeway segment levels of service are determined from segment density. **Table 3-4** presents the correlation between LOS and density in terms of passenger cars per mile per lane (pc/mi/ln) for freeway basic freeway segments.

3.5.5 Freeway Merge And Diverge Segments

Freeway merge and diverge segment analysis is based on peak hour *HCM 6* density analysis for freeway-to-arterial interchanges. According to *HCM 6* methodology, the ramp merge and diverge segments focus on an influential area of 1,500 feet, including the acceleration or deceleration lane(s) and adjacent freeway ramps. The methodology incorporates three fundamental steps:

- Determination of the traffic entering the freeway lanes upstream of the merge or at the beginning of the deceleration lane at diverge;
- Determination of the capacity for the segment; and
- Determination of the density of traffic flow within the ramp influence area and its level of service.

The level of service (LOS) for freeway merge and diverge segments is determined by traffic density based on criteria outlined in the *HCM 6*. **Table 3-5** presents the correlation between LOS and density in terms of passenger cars per mile per lane (pc/mi/ln) for freeway merge and diverge segments.

3.6 Level of Service Criteria

According to City of Brea, City of Fullerton, and City of Placentia, LOS D is the minimum acceptable condition that should be maintained during the morning and evening peak commute hours at intersections.

The City of La Habra has also established LOS D as its criterion for an acceptable level of service at City jurisdiction intersections. For intersections located along a Congestion Management Plan (CMP) network, LOS E is considered acceptable within the City of La Habra. However, LOS D is considered to be the acceptable level of service at all La Habra locations in order to be conservative.

Caltrans “endeavors to maintain a target LOS at the transition between LOS “C” and LOS “D” on State highway facilities”; it does not require that LOS “D” (shall) be maintained. However, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. Caltrans has determined that all state owned facilities that operate below LOS D should be identified and improved to an acceptable LOS. The *Caltrans Traffic Impact Study Guidelines dated December 2002* does state that if an existing state owned facility operates at less than LOS D, the existing service level should be maintained. At locations within the City of Brea but under the jurisdiction of Caltrans (i.e. study locations located along Imperial (SR-90) Highway), inclusive of the ramp intersections at the SR-57 Freeway/Lambert Road Interchange and SR-57 Freeway/Imperial Highway Interchange, Caltrans LOS standards would apply. Based on the above, LOS D is the acceptable condition that should be maintained for all key study intersections during the morning and evening peak commute hours with the exception of those within the City of La Habra where LOS E is defined in the CMP for Orange County as the acceptable limit.

TABLE 3-1
LEVEL OF SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS (ICU METHODOLOGY)

Level of Service (LOS)	Intersection Capacity Utilization Value (V/C)	Level of Service Description
A	≤ 0.600	EXCELLENT. No vehicle waits longer than one red light, and no approach phase is fully used.
B	0.601 – 0.700	VERY GOOD. An occasional approach phase is fully utilized; many drivers begin to feel somewhat restricted within groups of vehicles.
C	0.701 – 0.800	GOOD. Occasionally drivers may have to wait through more than one red light; backups may develop behind turning vehicles.
D	0.801 – 0.900	FAIR. Delays may be substantial during portions of the rush hours, but enough lower volume periods occur to permit clearing of developing lines, preventing excessive backups.
E	0.901 – 1.000	POOR. Represents the most vehicles intersection approaches can accommodate; may be long lines of waiting vehicles through several signal cycles.
F	> 1.000	FAILURE. Backups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. Potentially very long delays with continuously increasing queue lengths.

TABLE 3-2
LEVEL OF SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS (HCM METHODOLOGY)⁶

Control Delay (sec/veh)	Level of Service (LOS)	Level of Service Description
≤ 10	A	This level of service occurs when the v/c ratio is low and either progression is exceptionally favorable or the cycle length is very short.
> 10-20	B	This level generally occurs when the v/c ratio is low and either progression is highly favorable or the cycle length is short.
> 20-35	C	Average traffic delays. These higher delays may result when progression is favorable or the cycle length is moderate. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, though many still pass through the intersection without stopping.
> 35-55	D	Long traffic delays. At level D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high v/c ratios. Many vehicles stop and individual cycle failures are noticeable.
> 55-80	E	Very long traffic delays. This level is considered by many agencies to be the limit of acceptable delay. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycle failures are frequent.
> 80	F	Severe congestion. This level, considered to be unacceptable to most drivers, often occurs with over saturation, that is, when arrival flow rates exceed the capacity of the intersection. It may also occur at high v/c ratios below 1.0 with many individual cycle failures. Poor progression and long cycle lengths may also be major contributing factors to such delay levels.

3.7 Existing Level of Service Results

3.7.1 Existing Conditions Intersection Capacity Analysis (ICU Methodology)

Table 3-6 summarizes the existing Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hour service level calculations for the twenty-seven (27) key study intersections evaluated under ICU analysis based on existing traffic volumes and current street geometrics. Review of *Table 3-6* indicates that the intersection of State College Boulevard at Imperial Highway currently operates at unacceptable LOS during the Weekend (Saturday) Midday peak hour. The remaining twenty-six (26) key study intersections currently operate an acceptable service levels during the Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hours. It is noted that the two (2) study intersections within the City of Fullerton jurisdiction (Intersections No. 26 and 27) were evaluated using the HCM methodology only per their criteria and has been omitted from the ICU tables

Appendix C presents the ICU LOS calculation worksheets for the twenty-seven (27) key study intersections for the Weekday AM peak hour, Weekday PM peak hour, and Weekend (Saturday) Midday peak hours.

3.7.2 Existing Conditions Intersection Capacity Analysis (HCM Methodology)

Table 3-7 summarize the existing peak hour service level calculations for the twenty-seven (27) key study intersections evaluated during the Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hours based on existing traffic volumes and current street geometrics based on the HCM Method of Analysis. Review of *Table 3-7* indicates that the intersection of State College Boulevard at Imperial Highway currently operates an unacceptable LOS during the Weekday PM and Weekend (Saturday) Midday peak hours. The remaining twenty-six (26) key study intersections currently operate an acceptable service levels during the Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hours. It is noted that the two (2) study intersections within the City of Placentia jurisdiction (Intersections No. 28 and 29) were evaluated using the ICU methodology only per their criteria and has been omitted from the HMC tables.

Appendix D presents the HCM LOS calculation worksheets for the twenty-seven (27) key study intersections for the Weekday AM peak hour, Weekday PM peak hour, and Weekend (Saturday) Midday peak hours.

4.0 TRAFFIC FORECASTING METHODOLOGY

In order to estimate the traffic impact characteristics of the proposed Project, a multi-step process has been utilized. The first step is traffic generation, which estimates the total arriving and departing traffic on a peak hour and daily basis. The traffic generation potential is forecast by applying the appropriate vehicle trip generation equations or rates to the project development tabulation.

The second step of the forecasting process is traffic distribution, which identifies the origins and destinations of inbound and outbound project traffic. These origins and destinations are typically based on demographics and existing/expected future travel patterns in the study area.

The third step is traffic assignment, which involves the allocation of project traffic to study area streets and intersections. Traffic assignment is typically based on minimization of travel time, which may or may not involve the shortest route, depending on prevailing operating conditions and travel speeds. Traffic distribution patterns are indicated by general percentage orientation, while traffic assignment allocates specific volume forecasts to individual roadway links and intersection turning movements throughout the study area.

With the forecasting process complete and project traffic assignments developed, the impact of the proposed project is isolated by comparing operational (LOS) conditions at selected key intersections using expected future traffic volumes with and without forecast project traffic. The need for site-specific and/or cumulative local area traffic improvements can then be evaluated and the significance of the project's impacts identified.

5.0 PROJECT TRAFFIC CHARACTERISTICS

5.1 Project Traffic Generation

Traffic generation is expressed in vehicle trip ends, defined as one-way vehicular movements, either entering or exiting the generating land use. Generation equations and/or rates used in the traffic forecasting procedure are found in the 10th Edition of *Trip Generation*, published by the Institute of Transportation Engineers (ITE) [Washington D.C., 2017] and empirical trip generation rates developed from studies of existing Lifetime Fitness facilities.

Table 5-1 summarizes the trip generation rates used in forecasting the vehicular trips generated by the proposed Project and also presents the project's forecast peak hour and daily traffic volumes. As shown in the upper portion of *Table 5-1*, ITE Land Use 221: Multifamily Housing (Mid-Rise) trip rates and ITE Land Use 820: Shopping Center equations, and empirical rates from existing Lifetime Fitness facilities will be used to forecast the trip generation potential of a fully occupied existing Brea Mall and site, as well as the Project.

It should be noted that traffic patterns near Malls vary by time of year (i.e. holiday seasons). However, standard engineering practice consist of forecasting trips during a "typical" weekday and "typical" Saturday periods (non-holiday season). Therefore this standard practice has been applied in this report. It is very common for large shopping centers to have parking management plans in place to manage peak seasonal demands that are specific to its needs. It is anticipated that the current practices of the Brea Mall as it relates to seasonal peaks will continue to apply and/or be adjusted accordingly.

A review of the middle portion of *Table 5-1* indicates that a fully occupied Brea Mall (including the currently vacant second story of Sears) (Row B) is forecast to generate approximately 30,817 Weekday daily trips, with 757 trips (469 inbound, 288 outbound) produced in the Weekday AM peak hour and 3,247 trips (1,559 inbound, 1,688 outbound) produced in the Weekday PM peak hour on a "typical" weekday. A fully occupied Brea Mall is forecast to generate 39,183 Saturday daily trips, with 4,204 trips (2,186 inbound, 2,018 outbound) produced in the Saturday Midday peak hour on a "typical" Saturday.

The lower portion of *Table 5-1* presents the trip generation associated with the existing occupied Brea Mall and the additional proposed Project uses (Row C). A review of lower portion of this table indicates that the proposed Project with the existing Brea Mall is forecast to generate approximately 34,957 Weekday daily trips, with 1,072 trips (634 inbound, 438 outbound) produced in the Weekday AM peak hour and 3,671 trips (1,840 inbound, 1,831 outbound) produced in the Weekday PM peak hour on a "typical" weekday. The proposed Project with the existing Brea Mall is forecast to generate 43,214 Saturday daily trips, with 4,645 trips (2,358 inbound, 2,287 outbound) produced in the Saturday Midday peak hour on a "typical" Saturday.

When the proposed Project is compared to an existing fully occupied Brea Mall site, the proposed Project is forecast to generate 4,140 more Weekday daily trips, 315 more Weekday AM peak hour trips, 424 more Weekday PM peak hour trips, 4,031 more Saturday daily trips, and 441 more

Saturday Midday peak hour trips. The potential impact of these added Project trips has been evaluated in this traffic analysis.

5.2 Project Traffic Distribution and Assignment

Figures 5-1 and **5-2** presents the Project Trip Distribution for the commercial and residential components, respectively. The Project Trip Distribution for the retail and residential components have been distributed and assigned to the adjacent street system based on Project Select Zone model runs and have been further refined based on the following considerations:

- Recognition that the Brea Mall draws traffic from the surrounding region, and is not just a local area attraction.
- location of site access points in relation to the surrounding street system,
- the site's immediate proximity to major traffic carriers and regional access routes, such as the SR-57 Freeway and SR-90 (Imperial Highway),
- physical characteristics of the circulation system such as lane channelization and presence of traffic signals that affect travel patterns,
- presence of traffic congestion in the surrounding vicinity,
- ingress/egress availability at the project site, and
- input by City Staff.

It should be noted that Project traffic has been distributed to the Brea Mall's existing site access intersections of Randolph Avenue at Brea Mall and Brea Mall South at State College Boulevard due to the location of the proposed Project in the southwest portion of the Brea Mall site. From a review of *Figure 5-1*, approximately 36% and 54% of the Project's new commercial traffic is forecast to utilize Randolph Avenue at Brea Mall and Brea Mall South at State College Boulevard, respectively. As shown in *Figure 5-2*, approximately 83% and 17% of the Project's residential traffic utilize Randolph Avenue at Brea Mall and Brea Mall South at State College Boulevard, respectively,

The anticipated weekday AM and PM peak hour and weekend (Saturday) midday peak hour project traffic volumes associated with the proposed Project are presented in **Figures 5-3, 5-4** and **5-5**, respectively. *Figures 5-4* and *5-5* also present the weekday and weekend daily Project traffic volumes, respectively. The traffic volume assignments presented in *Figures 5-3, 5-4* and *5-5* reflect the traffic distribution characteristics shown in *Figures 5-1* and *5-2* and the traffic generation forecast presented in *Table 5-1*.

5.3 Existing Plus Project Traffic Conditions

The Existing Plus Project traffic conditions have been generated based upon existing conditions and the estimated Project traffic. These forecast traffic conditions have been prepared to assess the potential impacts of the Project upon the circulation system as it currently exists. This traffic volume scenario and the related intersection capacity analyses will identify the roadway improvements necessary to mitigate the direct traffic impacts of the Project, if any.

Figures 5-6, 5-7 and **5-8** present projected weekday AM and PM peak hour and weekend (Saturday) midday peak hour traffic volumes at the twenty-nine (29) key study intersections with the addition of

the trips generated by the proposed Project to existing traffic volumes, respectively. *Figures 5-7 and 5-8* also presents the Existing Plus Project daily traffic volumes for a weekday and weekend, respectively.

TABLE 5-1
PROJECT TRAFFIC GENERATION RATES AND FORECAST¹²

Notes:
TE/TSF GLA = Trip End per Thousand Square Feet Gross Leasable Area
TE/DU = Trip End per Dwelling Unit

¹² Source: *Trip Generation*, 10th Edition, Institute of Transportation Engineers (ITE), Washington, D.C. (2017).
¹³ Mid-Rise Multifamily Housing consists of buildings that are between 3 and 10 levels.
¹⁴ Trip Generation rates based on the following equations:
▪ Weekday Daily: $\text{Ln}(T) = 0.68\text{Ln}(X) + 5.57$
▪ Weekday AM Peak Hour: $T = 0.50(X) + 151.78$
▪ Weekday PM Peak Hour: $\text{Ln}(T) = 0.74\text{Ln}(X) + 2.89$
▪ Saturday Daily: $\text{Ln}(T) = 0.62\text{Ln}(X) + 6.24$
▪ Saturday Peak Hour of Generator: $\text{Ln}(T) = 0.79\text{Ln}(X) + 2.79$
¹⁵ Source: *Northshore Mall Redevelopment Traffic Impact and Access Study Appendix Table A-2*, prepared by VHB, dated April 2018. Based on trip rates from empirical count data collected by VHB at Life Time Fitness facilities in Westwood and Framingham, Massachusetts.
¹⁶ The pass-by trip reductions applied to retail trips are 10% for Weekday Daily, 5% for Weekday AM peak hour, 10% for Weekday PM peak hour, 10% for Saturday Daily, and 10% for Saturday Midday peak hour.
¹⁷ The fully occupied Brea Mall includes the existing 1,210,438 SF of occupied mall and 80,995 SF of second floor Sears vacancy.
¹⁸ The proposed Brea Mall includes the existing 1,210,438 SF of occupied mall, 80,995 SF of the occupied first floor of the Sears building to be demolished, and 183,615 SF of additional commercial.
¹⁹ Consistent with the *Trip Generation Handbook*, published by ITE (2017), Project trip generation was adjusted to account for internal capture between the retail and residential components of the Project. As there is no Saturday internal capture worksheets available, Weekday Daily and Weekday PM peak hour calculations have been applied to Saturday Daily and Saturday Midday peak hour.

6.0 FUTURE TRAFFIC CONDITIONS

6.1 Ambient Traffic Growth

Horizon year, background traffic growth estimates have been calculated using an ambient traffic growth factor. The ambient traffic growth factor is intended to include unknown and future related projects in the study area, as well as account for regular growth in traffic volumes due to the development of projects outside the study area. The future growth in traffic volumes has been calculated at one percent (1.0%) per year. Applied to the Year 2019 existing traffic volumes, this factor results in an 3.0% growth in existing volumes to the near-term horizon year 2022.

6.2 Related Projects Traffic Characteristics

In order to make a realistic estimate of future on-street conditions prior to implementation of the proposed Project, the status of other known development projects (related projects) within the area of the proposed project has been researched at the City of Brea, City of La Habra, and City of Fullerton. With this information, the potential impact of the proposed Project can be evaluated within the context of the cumulative impact of all ongoing development.

Based on our research during the scoping process, there are six (6) related projects in the City of Brea and one (1) related projects in the City of Fullerton that are being processed for approval. All of these related projects have been included as part of the cumulative background setting.

Table 6-1 provides a brief description for each of the seven (7) related projects. *Figure 6-1* graphically illustrates the location of the seven (7) related projects. These related projects are expected to generate vehicular traffic, which may affect the operating conditions of the key study intersections. In addition to the development projects noted in *Table 6-1*, roadway/interchange improvements associated with the SR-57 Lambert Interchange improvement project, now under construction, have been included in the Year 2022 and Year 2040 cumulative traffic conditions (See Section 10.1 for additional information).

Table 6-2 summarizes the trip generation potential for all seven (7) related projects on a weekday daily and peak hour basis and on a weekend (Saturday) basis and midday peak hour. As shown, the related projects are expected to generate 28,114 weekday daily trips, with 2,303 trips (1,134 inbound, 1,169 outbound) anticipated during the weekday AM peak hour and 2,571 trips (1,272 inbound, 1,299 outbound) produced during the weekday PM peak hour. On a weekend (Saturday), the related projects are forecast to generate 27,156 weekend daily trips, with 2,527 trips (1,301 inbound, 1,226 outbound) anticipated during the weekend midday peak hour.

The weekday AM and PM peak hour traffic volumes associated with six (6) of the seven (7) related projects in the Year 2022 are presented in *Figures 6-2* and *6-3*, respectively, whereas the weekend (Saturday) midday peak hour traffic volumes are presented in *Figure 6-4*. *Figures 6-3* and *6-4* also present the weekday and weekend daily related project traffic volumes. Per the direction of City staff the Brea 265 Specific Plan Project has been included as a related project as part of only Year 2040 background traffic conditions.

²⁴ Per the direction of City staff the Brea 265 Specific Plan Project has been included as a related project as part of Year 2040 background traffic conditions.

²⁵ Source: *Beckman Business Center EIR Traffic Impact Analysis*, prepared by LLG Engineers., dated November 10, 2016. Although this development is completely constructed, it is currently partially occupied. Hence to provide a conservative assessment, all buildings are assumed to be vacant.

6.3 Year 2040 Traffic Conditions

As coordinated with City staff, the Year 2040 traffic volume forecasts for this traffic study were developed via the utilization of the OCTAM4.0 Year 2040 traffic model provided by OCTA. Specifically, daily, AM peak period and PM peak period link traffic volumes were provided by OCTA for the existing base year (i.e. Year 2012) and for the Year 2040 year. The AM peak period corresponds to a three-hour morning commute period while the PM peak period corresponds to a four-hour afternoon commute period. Using the peak period model runs and the OCTA approved peak hour factors (i.e. AM = 0.3566 and PM = 0.2662), the one-hour peak hour link traffic volumes were determined. These future year 2040 link traffic volumes were post-processed based on the relationship of the base year validation model run output to the base year ground traffic counts resulting in anticipated Year 2040 without project daily traffic volumes for the key roadway segments and AM peak hour/PM peak hour turning movements for the key study intersections.

Appendix E presents the post-processing worksheets.

6.4 Year 2022 and Year 2040 Traffic Volumes

6.4.1 Year 2022 Traffic Volumes

Figures 6-5, 6-6 and 6-7 present the weekday AM and PM peak hour and weekend (Saturday) midday peak hour cumulative traffic volumes (existing traffic + ambient growth + related projects) at the twenty-nine (29) key study intersections for the Year 2022, respectively. **Figures 6-6 and 6-7** also presents the Year 2022 daily cumulative traffic volumes during a weekday and weekend, respectively.

Figures 6-8, 6-9 and 6-10 illustrate the Year 2022 forecast AM and PM peak hour traffic volumes, with the inclusion of the trips generated by the proposed Project, respectively. **Figures 6-9 and 6-10** also presents the Year 2022 daily cumulative plus project traffic volumes.

6.4.2 Year 2040 Traffic Volumes

Figures 6-11, 6-12 and 6-13 present the anticipated Year 2040 AM and PM peak hour cumulative traffic volumes at the twenty-nine (29) key study intersections, respectively. **Figures 6-12 and 6-13** also presents the Year 2040 daily cumulative traffic volumes.

Figures 6-14, 6-15 and 6-16 illustrate the anticipated Year 2040 forecast AM and PM peak hour traffic volumes, with the inclusion of the trips generated by the proposed Project, respectively. **Figures 6-15 and 6-16** also presents the Year 2040 daily cumulative plus project traffic volumes.

7.0 TRAFFIC IMPACT ANALYSIS METHODOLOGY

The relative impact of the proposed Project during the weekday AM peak hour and PM peak hour and weekend (Saturday) Midday peak hour was evaluated based on analysis of future operating conditions at the twenty-nine (29) key study intersections, without, then with, the proposed Project. The previously discussed capacity analysis procedures were utilized to investigate the future volume-to-capacity relationships and service level characteristics at each study intersection. The significance of the potential impacts of the Project at each key intersection was then evaluated using the following traffic impact criteria.

7.1 Impact Criteria and Thresholds

7.1.1 *City of Brea*

For the ICU analysis, an impact is considered to be significant if the Project causes an intersection at LOS D or better to degrade to LOS E or F, or if the Project increases traffic demand at a signalized study intersection by 0.020 or greater and the intersection is forecast to operate at LOS E or F.

For the HCM analysis, a significant LOS impact occurs when the proposed Project causes the level of service at an intersection to fall below LOS D with the addition of Project traffic to baseline conditions. For intersections that already operate at unacceptable LOS E or F under the baseline conditions, a significant impact is defined as the proposed Project causing an increase in average critical delay value by 2.0 seconds or more. This significant impact criteria would only apply to those intersections located within the City of Brea and under its sole jurisdiction. At locations within the City of Brea but under the jurisdiction of Caltrans (i.e. study locations located along Imperial (SR-90) Highway, Caltrans LOS standards and impact criteria noted in the following Section 7.1.5 would apply.

7.1.2 *City of La Habra*

For the ICU analysis, LOS D is the acceptable condition that should be maintained during the morning and evening peak commute hours on all intersections within the City of La Habra, except those on the CMPHS of Orange County, where LOS E is defined in the CMP for Orange County as the acceptable limit and is acceptable for State Highway intersections. However, LOS D is considered acceptable at the intersection of Harbor Boulevard at Imperial Highway in order to be conservative. An impact is considered to be significant if the Project causes an intersection to degrade to LOS E or F, or if the Project increases traffic demand at a signalized study intersection by 0.010 or greater and the intersection is forecast to operate at LOS E or F.

7.1.3 *City of Fullerton*

The City of Fullerton considers an impact to be significant if the project causes an intersection at LOS D or better to degrade to LOS E or F. Per the City of Fullerton traffic study guidelines, peak hour intersection operating conditions were evaluated using the *Highway Capacity Manual* (HCM) Operations methodology.

7.1.4 City of Placentia

For the ICU analysis, an impact is considered to be significant if the Project causes an intersection at LOS D or better to degrade to LOS E or F, or if the Project increases traffic demand at a signalized study intersection by 0.010 or greater and the intersection is forecast to operate at LOS E or F.

7.1.5 Caltrans

Consistent with the *Caltrans Guide for the Preparation of Traffic Impact Studies*, the following criteria has been utilized to determine project impacts at the state-controlled study intersections:

- Caltrans endeavors to maintain a target LOS at the transition between LOS “C” and LOS “D” on State highway facilities. However, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. Caltrans has established that LOS D is the operating standard for all Caltrans facilities. Caltrans has determined that all state-owned facilities that operate below LOS D should be identified and improved to an acceptable LOS. The *Caltrans Traffic Impact Study Guidelines dated December 2002* states that if an existing State-owned facility operates at less than the target LOS (i.e. LOS D); the existing service level should be maintained.

7.2 Traffic Impact Analysis Scenarios

The following scenarios are those for which volume/capacity calculations have been performed at the twenty-nine (29) key intersections for existing plus project, near-term (Year 2022) and long-term (Year 2040) traffic conditions:

1. Existing Baseline (Existing + Fully Occupied Mall) Traffic Conditions;
2. Existing Baseline (Existing + Fully Occupied Mall) Plus Project Traffic Conditions;
3. Scenario (2) with Mitigation, if necessary;
4. Near-Term (Year 2022) Background Traffic Conditions (Existing plus Ambient Growth plus Related Projects);
5. Near-Term (Year 2022) Background Plus Project Traffic Conditions;
6. Scenario (5) with Mitigation, if necessary;
7. Long-Term Buildout Traffic Conditions;
8. Long-Term Buildout Plus Project Traffic Conditions; and
9. Scenario (8) with Mitigation, if necessary.

7.3 City of Brea Nexus Program

To satisfy the AB 1600 legislative requirement, development impact fees have been established for future traffic impacts within the City of Brea. Ensuring that every development project contributes a fair share of transportation improvements in the community, the City has introduced the “Transportation Improvement Nexus Program”. In 2011, the Nexus Program was updated to reflect transportation needs and incorporate capacity improvements in an orderly fashion. The program ensures all future development with the City of Brea contributes on a fair share basis.

8.0 PEAK HOUR INTERSECTION CAPACITY ANALYSIS

8.1 Existing Plus Project Analysis - ICU

Table 8-1 summarizes the peak hour Level of Service results at the twenty-seven (27) key study intersections evaluated under ICU analysis for existing plus project traffic conditions. The first column (1) of ICU/LOS values in *Table 8-1* presents a summary of existing Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hour traffic conditions (which were also presented in *Table 3-6*). The second column (2) lists existing plus project traffic conditions. The third column (3) shows the increase in ICU value due to the added peak hour Project trips and indicates whether the traffic associated with the Project will have a significant impact based on the LOS standards and significant impact criteria defined in this report. The fourth column (4) presents the resultant level of service with the inclusion of recommended traffic improvements, where needed, to achieve an acceptable level of service.

8.1.1 Existing Plus Project Traffic Conditions

Review of columns (2) and (3) of *Table 8-1* indicates that traffic associated with the proposed Project will significantly impact one (1) of the twenty-seven (27) key study intersections during the Weekend (Saturday) Midday peak hour when compared to the LOS standards and significant impact criteria specified in this report. The one (1) location significantly impacted by the proposed Project is as follows:

<u>Key Intersection</u>	<u>AM Peak Hour</u>		<u>PM Peak Hour</u>		<u>Weekend</u> <u>Midday Peak Hour</u>	
	<u>ICU</u>	<u>LOS</u>	<u>ICU</u>	<u>LOS</u>	<u>ICU</u>	<u>LOS</u>
20. State College Boulevard at Imperial Highway	--	--	--	--	1.021	F

However, as shown in column (4) of *Table 8-1*, the implementation of recommended mitigation measures at the impacted intersections offsets the Project's impact. After implementation of the recommended mitigation measures, the impacted intersections are forecast to operate at better service levels than pre-Project conditions. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

Appendix C presents the Existing Plus Project ICU/LOS calculations for the twenty-seven (27) key study intersections.

TABLE 8-1
EXISTING PLUS PROJECT PEAK HOUR INTERSECTION CAPACITY ANALYSIS - ICU

Key Intersection	Minimum Acceptable LOS	Time Period	(1) Existing Traffic Conditions		(2) Existing Plus Project Traffic Conditions		(3) Significant Impact		(4) Existing Plus Project Plus Improvements Traffic Conditions

Note:

- **Bold ICU/LOS** values indicate adverse service levels based on the City LOS standards.

8.2 Existing Plus Project Analysis - HCM

Table 8-2 summarizes the peak hour level of service results at the twenty-seven (27) key study intersections evaluated under HCM analysis for Existing Plus Project traffic conditions. The first column (1) of HCM//LOS values in *Table 8-2* presents a summary of existing Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hour traffic conditions (which were also presented in *Table 3-7*). The second column (2) lists existing plus project traffic conditions. The third column (3) shows the increase in delay due to the added peak hour Project trips and indicates whether the traffic associated with the Project will have a significant impact based on City LOS standards and significant impact criteria defined in this report. The fourth column (4) indicates whether the traffic associated with the Project will have a significant impact based on Caltrans LOS standards and significant impact criteria defined in this report. The fifth column (5) indicates the anticipated LOS with recommended improvements, if any.

8.2.1 Existing Plus Project Traffic Conditions

Review of columns (2), (3), and (4) of *Table 8-2* indicates that traffic associated with the proposed Project will significantly impact one (1) of the twenty-seven (27) key study intersections during the Weekend (Saturday) Midday peak hour when compared to the LOS standards and significant impact criteria specified in this report. The one (1) location significantly impacted by the proposed Project is as follows:

<u>Key Intersection</u>	<u>AM Peak Hour</u>		<u>PM Peak Hour</u>		<u>Weekend</u>	
	<u>Delay</u>		<u>Delay</u>		<u>Midday Peak Hour</u>	
	<u>(sec/veh)</u>	<u>LOS</u>	<u>(sec/veh)</u>	<u>LOS</u>	<u>(sec/veh)</u>	<u>LOS</u>
19. Randolph Avenue at Imperial Highway	--	--	--	--	59.4	E

However, as shown in column (5) of *Table 8-2*, the implementation of recommended mitigation measures at the impacted intersections offsets the Project's impact. After implementation of the recommended mitigation measures, the impacted intersection is forecast to operate at acceptable service levels. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

Appendix D presents the Existing Plus Project HCM/LOS calculations for the twenty-seven (27) key study intersections.

TABLE 8-2

- N/A = City of Brea impact criteria is Not Applicable (N/A) for intersections within the City of Brea that are under Caltrans jurisdiction. See *Sections 7.1.1* and *7.1.2* for definition of significant impact criteria.

8.3 Year 2022 Traffic Conditions - ICU

Table 8-3 summarizes the peak hour Level of Service results at the twenty-seven (27) key study intersections evaluated under ICU analysis for the Year 2022 horizon year. The first column (1) of ICU/LOS values in *Table 8-3* presents a summary of existing Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hour traffic conditions. The second column (2) lists projected cumulative traffic conditions (existing plus ambient plus related projects traffic) based on existing intersection geometry, but without any traffic generated from the proposed Project. The third column (3) presents forecast Year 2022 near-term traffic conditions with the addition of Project traffic. The fourth column (4) shows the increase in ICU value due to the added peak hour Project trips and indicates whether the traffic associated with the Project will have a significant impact based on the LOS standards and significant impact criteria defined in this report. The fifth column (5) presents the resultant level of service with the inclusion of recommended traffic improvements, where needed, to achieve an acceptable level of service.

8.3.1 Year 2022 Cumulative Traffic Conditions - ICU

An analysis of future (Year 2022) background traffic conditions indicates that the addition of ambient traffic growth and related project traffic will adversely impact one (1) of the twenty-seven (27) key study intersections. The remaining twenty-six (26) key study intersections are forecast to continue to operate at an acceptable LOS D or better based on the LOS criteria identified in this report. The locations identified below are forecast to operate at unacceptable levels of service:

<u>Key Intersection</u>	<u>AM Peak Hour</u>		<u>PM Peak Hour</u>		<u>Weekend</u> <u>Midday Peak Hour</u>	
	<u>ICU</u>	<u>LOS</u>	<u>ICU</u>	<u>LOS</u>	<u>ICU</u>	<u>LOS</u>
20. State College Boulevard at Imperial Highway	--	--	--	--	1.058	F

8.3.2 Year 2022 Cumulative Plus Project Conditions - ICU

Review of columns (3) and (4) of *Table 8-3* indicates that traffic associated with the proposed Project will have a cumulative significant impact at one (1) of the twenty-seven (27) key study intersections during the Weekend (Saturday) Midday peak hour when compared to the LOS standards and significant impact criteria specified in this report. The one (1) location cumulatively impacted by the proposed Project is as follows:

<u>Key Intersection</u>	<u>AM Peak Hour</u>		<u>PM Peak Hour</u>		<u>Weekend</u>	
					<u>Midday Peak Hour</u>	
	<u>ICU</u>	<u>LOS</u>	<u>ICU</u>	<u>LOS</u>	<u>ICU</u>	<u>LOS</u>
20. State College Boulevard at Imperial Highway	--	--	--	--	1.098	F

However, as shown in column (5) of *Table 8-3*, the implementation of recommended mitigation measures at the impacted intersections offsets the Project's impact. After implementation of the recommended mitigation measures, the impacted intersections are forecast to operate at better service levels than pre-Project conditions. It should be noted that column (5) of *Table 8-3* also shows the level of service after implementation of the planned SR-57 Lambert Road Interchange project. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

Appendix C also presents the near-term ICU/LOS calculations for the twenty-seven (27) key study intersections.

		PM	0.695	B	0.715	C	0.716	C	0.001	No	--	--
		Sat MD	0.532	A	0.547	A	0.550	A	0.003	No	--	--

Notes:

- **Bold ICU/LOS** values indicate adverse service levels based on the City LOS standards.

8.4 Year 2022 Traffic Conditions - HCM

Table 8-4 summarizes the peak hour Level of Service results at the twenty-seven (27) key study intersections evaluated under HCM analysis for the Year 2022 horizon year. The first column (1) of HCM/LOS values in *Table 8-4* presents a summary of existing Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hour traffic conditions. The second column (2) lists projected cumulative traffic conditions (existing plus ambient plus related projects traffic) based on existing intersection geometry, but without any traffic generated from the proposed Project. The third column (3) presents forecast Year 2022 near-term traffic conditions with the addition of Project traffic. The fourth column (4) shows the increase in delay due to the added peak hour Project trips and indicates whether the traffic associated with the Project will have a significant impact based on City LOS standards and significant impact criteria defined in this report. The fifth column (5) indicates whether the traffic associated with the Project will have a significant impact based on Caltrans LOS standards and significant impact criteria defined in this report. The sixth column (6) presents the resultant level of service with the inclusion of recommended traffic improvements, where needed, to achieve an acceptable level of service.

8.4.1 Year 2022 Cumulative Traffic Conditions - HCM

An analysis of future (Year 2022) background traffic conditions indicates that the addition of ambient traffic growth and related projects traffic will adversely impact three (3) of the twenty-seven (27) key study intersections during the Weekday AM, Weekday PM, and/or Weekend (Saturday) Midday peak hours under HCM analysis. The remaining twenty-four (24) key study intersections are forecast to continue to operate at acceptable LOS based on the LOS criteria defined in this report. The locations identified below are forecast to operate at unacceptable levels of service:

Key Intersection	AM Peak Hour		PM Peak Hour		Weekend Midday Peak Hour	
	<u>Delay</u>	<u>LOS</u>	<u>Delay</u>	<u>LOS</u>	<u>Delay</u>	<u>LOS</u>
	<u>(sec/veh)</u>		<u>(sec/veh)</u>		<u>(sec/veh)</u>	
18. Brea Boulevard at Imperial Highway	56.7	E	--	--	--	--
20. State College Boulevard at Imperial Highway	--	--	84.2	F	173.9	F
27. State College Boulevard at Bastanchury Road	--	--	55.7	E	--	--

8.4.2 Year 2022 Cumulative Plus Project Conditions - HCM

Review of columns (3), (4) and (5) of *Table 8-4* indicates that that traffic associated with the proposed Project will have a cumulative significant impact at three (3) of the twenty-seven (27) key study intersections during the Weekend (Saturday) Midday peak hours when compared to the LOS standards and significant impact criteria specified in this report. The three (3) location cumulatively impacted by the proposed Project is as follows:

<u>Key Intersection</u>	<u>AM Peak Hour</u>		<u>PM Peak Hour</u>		<u>Weekend</u>	
	<u>Delay</u>		<u>Delay</u>		<u>Midday Peak Hour</u>	
	<u>(sec/veh)</u>	<u>LOS</u>	<u>(sec/veh)</u>	<u>LOS</u>	<u>(sec/veh)</u>	<u>LOS</u>
18. Brea Boulevard at Imperial Highway	58.9	E	--	--	--	--
19. Randolph Avenue at Imperial Highway	--	--	--	--	73.8	E
20. State College Boulevard at Imperial Highway	--	--	93.8	F	198.4	F

However, as shown in column (5) of *Table 8-5*, the implementation of recommended mitigation measures at the impacted intersections offsets the Project's impact. After implementation of the recommended mitigation measures, the impacted intersections are forecast to operate at better service levels than pre-Project conditions. It should be noted that column (5) of *Table 8-4* also shows the level of service after implementation of the planned SR-57 Lambert Road Interchange project. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

Appendix D also presents the near-term HCM/LOS calculations for the twenty-seven (27) key study intersections.

Note: s/v

- **Bold HCM/LOS** values indicate adverse service levels based on the City and Caltrans LOS standards.
- N/A = City of Brea impact criteria is Not Applicable (N/A) for intersections within the City of Brea that are under Caltrans jurisdiction. See *Sections 7.1.1* and *7.1.2* for definition of significant impact criteria.

³² It is noted that the mitigation improves to pre-Project conditions.

8.5 Year 2040 Traffic Conditions - ICU

Table 8-5 summarizes the peak hour Level of Service results at the twenty-seven (27) key study intersections evaluated under ICU analysis for the Year 2040. The first column (1) of ICU/LOS values in *Table 8-5* presents a summary of existing Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hour traffic conditions. The second column (2) lists projected Year 2040 long-term traffic conditions based on existing intersection geometry, but without any traffic generated from the proposed Project. The third column (3) presents forecast Year 2040 long-term traffic conditions with the addition of Project traffic. The fourth column (4) shows the increase in ICU value due to the added peak hour Project trips and indicates whether the traffic associated with the Project will have a significant impact based on the LOS standards and significant impact criteria defined in this report. The fifth column (5) presents the resultant level of service with the inclusion of recommended traffic improvements, where needed, to achieve an acceptable level of service.

It should be noted that the intersections of SR-57 SB Ramps at Lambert Road and SR-57 NB Ramps at Lambert Road include planned SR-57 Lambert Road Interchange project improvements.

8.5.1 Year 2040 Traffic Conditions - ICU

Review of column (2) of *Table 8-5* shows that projected long-term (Year 2040) without project traffic will adversely impact three (3) of the twenty-seven (27) key study intersections during the Weekday AM and/or Weekend (Saturday) Midday peak hours when compared to the LOS standards specified in this report. The remaining twenty-four (24) key study intersections are forecast to operate at an acceptable LOS D or better for long-term (Year 2040) traffic conditions. The locations projected to operate at an adverse LOS are as follows:

<u>Key Intersection</u>	<u>AM Peak Hour</u>		<u>PM Peak Hour</u>		<u>Weekend</u> <u>Midday Peak Hour</u>	
	<u>ICU</u>	<u>LOS</u>	<u>ICU</u>	<u>LOS</u>	<u>ICU</u>	<u>LOS</u>
16. Harbor Boulevard at Imperial Highway	0.901	E	--	--	--	--
20. State College Boulevard at Imperial Highway	--	--	--	--	1.103	F
23. Associated Road at Imperial Highway	0.937	E	--	--	--	--

8.5.2 Year 2040 Plus Project Traffic Conditions - ICU

Review of columns (3) and (4) of *Table 8-5* indicates that traffic associated with the proposed Project will have a cumulative significant impact at one (1) of the twenty-seven (27) key study intersections during the Weekend (Saturday) Midday peak hours when compared to the LOS standards and significant impact criteria specified in this report. The one (1) location cumulatively impacted by the proposed Project is as follows:

<u>Key Intersection</u>	<u>AM Peak Hour</u>		<u>PM Peak Hour</u>		<u>Weekend</u> <u>Midday Peak Hour</u>	
	<u>ICU</u>	<u>LOS</u>	<u>ICU</u>	<u>LOS</u>	<u>ICU</u>	<u>LOS</u>
20. State College Boulevard at Imperial Highway	--	--	--	--	1.143	F

However, as shown in column (5) of *Table 8-5*, the implementation of recommended mitigation measures at the impacted intersections offsets the Project's impact. After implementation of the recommended mitigation measures, the impacted intersections are forecast to operate at better service levels than pre-Project conditions. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

Appendix C presents the long-term ICU/LOS calculations for the twenty-seven (27) key study intersections.

		PM	0.695	B	0.786	C	0.787	C	0.001	No	--	--
		Sat MD	0.532	A	0.588	A	0.591	A	0.003	No	--	--

Notes:

- **Bold ICU/LOS** values indicate adverse service levels based on the City LOS standards.

8.6 Year 2040 Traffic Conditions - HCM

Table 8-6 summarizes the peak hour Level of Service results at the twenty-seven (27) key study intersections evaluated under HCM analysis for the Year 2040. The first column (1) of HCM/LOS values in *Table 8-6* presents a summary of existing Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hour traffic conditions. The second column (2) lists projected Year 2040 long-term traffic conditions based on existing intersection geometry, but without any traffic generated from the proposed Project. The third column (3) presents forecast Year 2040 long-term traffic conditions with the addition of Project traffic. The fourth column (4) shows the increase in delay due to the added peak hour Project trips and indicates whether the traffic associated with the Project will have a significant impact based on City LOS standards and significant impact criteria defined in this report. The fifth column (5) indicates whether the traffic associated with the Project will have a significant impact based on Caltrans LOS standards and significant impact criteria defined in this report. The sixth column (6) presents the resultant level of service with the inclusion of recommended traffic improvements, where needed, to achieve pre-Project conditions.

It should be noted that the intersections of SR-57 SB Ramps at Lambert Road and SR-57 NB Ramps at Lambert Road include planned SR-57 Lambert Road Interchange project improvements.

8.6.1 Year 2040 Traffic Conditions - HCM

Review of column (2) of *Table 8-6* shows that projected long-term (Year 2040) without Project traffic will adversely impact six (6) of the twenty-seven (27) key study intersections during the AM and/or PM peak hours when compared to the LOS standards specified in this report. The remaining twenty-one (21) key study intersections are forecast to operate at an acceptable LOS for long-term (Year 2040) traffic conditions. The locations identified below are forecast to operate at unacceptable levels of service:

<u>Key Intersection</u>	<u>AM Peak Hour</u>		<u>PM Peak Hour</u>		<u>Weekend</u> <u>Midday Peak Hour</u>	
	<u>Delay</u>	<u>LOS</u>	<u>Delay</u>	<u>LOS</u>	<u>Delay</u>	<u>LOS</u>
	<u>(sec/veh)</u>		<u>(sec/veh)</u>		<u>(sec/veh)</u>	
12. Kraemer Boulevard at Birch Street	--	--	62.5	E	--	--
16. Harbor Boulevard at Imperial Highway	56.6	E	59.0	E	--	--
20. State College Boulevard at Imperial Highway	--	--	65.7	E	144.6	F
22. SR-57 NB Ramps at Imperial Highway	--	--	--	--	73.3	E
23. Associated Road at Imperial Highway	60.1	E	--	--	--	--
27. State College Boulevard at Bastanchury Road	--	--	61.0	E	--	--

8.6.2 Year 2040 Plus Project Traffic Conditions – HCM

Review of columns (3), (4), and (5) of *Table 8-6* indicates that traffic associated with the proposed Project will cumulatively impact six (6) of the twenty-seven (27) key study intersections, when compared to LOS standards and significant impact criteria specified in this report. The six (6) locations cumulatively impacted by the proposed Project under Year 2040 Plus Project traffic conditions are as follows:

<u>Key Intersection</u>	<u>AM Peak Hour</u>		<u>PM Peak Hour</u>		<u>Weekend</u>	
	<u>Delay</u>		<u>Delay</u>		<u>Midday Peak Hour</u>	
	<u>(sec/veh)</u>	<u>LOS</u>	<u>(sec/veh)</u>	<u>LOS</u>	<u>(sec/veh)</u>	<u>LOS</u>
16. Harbor Boulevard at Imperial Highway	57.4	E	60.1	E	--	--
18. Brea Boulevard at Imperial Highway	56.6	E	--	--	--	--
19. Randolph Avenue at Imperial Highway	--	--	--	--	63.9	E
20. State College Boulevard at Imperial Highway	--	--	83.5	F	164.8	F
22. SR-57 NB Ramps at Imperial Highway	--	--	--	--	73.6	E
23. Associated Road at Imperial Highway	62.1	E	--	--	--	--

However, as shown in column (6) of *Table 8-6*, the implementation of recommended mitigation measures at the impacted intersections offsets the Project's impact. After implementation of the recommended mitigation measures, the impacted intersections are forecast to operate at better service levels than pre-Project conditions. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

Appendix D presents the long-term HCM/LOS calculations for the twenty-seven (27) key study intersections.

Notes:

- **Bold HCM/LOS** values indicate adverse service levels based on the City and Caltrans LOS standards.
- N/A = City of Brea impact criteria is Not Applicable (N/A) for intersections within the City of Brea that are under Caltrans jurisdiction. See *Sections 7.1.1* and *7.1.2* for definition of significant impact criteria.

³⁶ It is noted that the mitigation improves to pre-Project conditions.

9.0 SITE ACCESS EVALUATION

9.1 Site Access

The Brea Mall can be accessed from three of the four surrounding streets bordering the subject property, State College Boulevard, Randolph Avenue, and Birch Street; no vehicular access is provided from Imperial Highway. Vehicular access from Randolph Avenue is currently provided by two (2) signalized intersections, whereas one (1) signalized access is provided along Birch Street. From State College Boulevard, three (3) signalized intersections provide access to the Brea Mall. No change in access to the Brea Mall is proposed as a part of the Project. Since the Project is focused to the southwest portion of the Brea Mall property the southernmost driveways along Randolph Avenue and State College Boulevard are anticipated to be the focus of Project related trips.

As shown in the *Tables 8-1 through 8-6*, the intersections of Randolph Avenue at Madison Way, Randolph Avenue at Brea Mall, and Brea Mall South at State College Boulevard are forecast to operate at LOS D or better during the Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hours in all traffic conditions.

9.2 Focused Project Driveway Synchro Queuing Assessment

Per the direction of City of Brea and Caltrans a focused Synchro assessment has been completed at the two Project Driveways located closest to Imperial Highway along State College Boulevard and Randolph Avenue to assess if the stacking requirements with the proposed Project are adequate. It is our understanding the City of Brea and Caltrans would like to ensure that Randolph Avenue does not queue back from the Project Driveway onto Imperial Highway. As it relates to State College it is our understanding the City of Brea and Caltrans are concerned with how the southbound dual lefts will interact with the freeway on-ramp.

The queuing evaluation was conducted for Existing Plus Project and Year 2022 Plus Project Traffic Conditions and the Average Queue methodology, which calculates the average queue value in terms of number of vehicles per lane. At signalized intersections, the storage length for left-turn and right-turn lanes can vary based on vehicle demand and the green-time provided by the traffic signal. For the purposes of this traffic analysis, the minimum storage requirement for left-turn lanes and right-turn lanes was calculated by multiplying the anticipated average queue length computed by the Synchro modeling program by 150 percent.

Table 9-1 identifies the minimum required stacking/storage lengths for the key study locations for Existing and Existing Plus Project Traffic conditions. Review of *Table 9-1* shows that the southbound left-turn movement at State College Boulevard at Imperial Highway has queues that exceed its capacity, resulting the blockage of through lane traffic. The southbound left-turn lanes are underutilized due to the presence of a single SR-57 southbound on-ramp from Imperial Highway to the east of the intersection. In addition to the recommended improvements as detailed in *Section 10.0*, the addition of a second SR-57 southbound on-ramp from Imperial Highway would help distribute southbound left-turn traffic more equally between the lanes. Although the southbound left-turn movement would still have queues that exceed its capacity, the queue would be improved by

these recommendations. It should be noted that the queue related to the inbound movement at the Project driveways along State College Boulevard and Randolph Avenue are not anticipated to queue back to Imperial Highway.

Table 9-2 identifies the minimum required stacking/storage lengths for the key study locations for Year 2022 and Year 2022 Plus Project Traffic conditions. Review of *Table 9-2* shows that the southbound left-turn movement at State College Boulevard at Imperial Highway has queues that exceed its capacity. The southbound left-turn lanes are underutilized due to the presence of a single SR-57 southbound on-ramp from Imperial Highway to the east of the intersection. In addition to the recommended improvements as detailed in *Section 10.0*, the addition of a second SR-57 southbound on-ramp from Imperial Highway would help distribute southbound left-turn traffic more equally between the lanes. Although the southbound left-turn movement would still have queues that exceed its capacity, the queue would be improved by these recommendations. It should be noted that the queue related to the inbound movement at the Project driveways along State College Boulevard and Randolph Avenue are not anticipated to queue back to Imperial Highway.

Appendix F presents the Synchro queuing worksheets for the Project driveways.

TABLE 9-1

⁴² Maximum queue in feet (ft) is calculated by multiplying the *Average Queue* by a factor of 1.5.

⁴³ The HCM methodology is reporting values that are inconsistent with existing observations. Therefore, at this location *SimTraffic 10.0* methodology has been utilized. The 95th percentile vehicle queue value corresponds to a condition that is generally taken as the maximum queue..

⁴⁴ The eastbound dual left-turn pocket consists of approximately one lane of 240 feet and the other of 265 feet; however, an additional 300 feet of storage from the eastbound through lane can accommodate the remaining vehicles before reaching Imperial Highway.

⁴⁵ The southbound dual left-turn pocket consists of approximately one lane of 310 feet and the other of 270 feet.

10.0 PLANNED AND RECOMMENDED INTERSECTION IMPROVEMENTS

For those intersections where projected traffic volumes are expected to result in unacceptable operating conditions, this report recommends (identifies) improvement measures that change the intersection geometry to increase capacity. These capacity improvements involve roadway widening and/or re-striping to reconfigure (add lanes) to specific approaches of a key intersection. The identified improvements are expected to:

- mitigate the impact of existing traffic, Project traffic and future non-project (ambient traffic growth and cumulative project) traffic and
- improve Levels of Service to an acceptable range and/or to pre-project conditions.

Figures 10-1 and **10-2** present the recommended improvements and intersection controls at the key study intersections for the Existing Plus Project, Year 2022, and Year 2040 traffic conditions per ICU analysis and HCM analysis, respectively. These are discussed in more detail in the sections below.

Table 10-1 identifies the incremental intersection improvements needed by the relevant study years to maintain, where possible, acceptable service levels based on the LOS standards defined in this report, as detailed in the sections below.

10.1 Planned Improvements

The following improvements listed below are part of the SR-57 Lambert Interchange improvement project, now under construction, since the final completion date is unknown at this time Year 2022 analysis includes the resulting service levels with the planned improvements in the mitigation column for informational purposes. However, it is anticipated that these improvements will be implement prior to Year 2040 traffic conditions and therefore, are included as part of the background traffic conditions.

- **No. 4 – SR-57 SB Ramps at Lambert Road:** Widen the off-ramp to provide a second exclusive southbound left-turn lane. Restripe the shared southbound left-turn/through/right-turn lane to a second exclusive right-turn lane. Widen to provide a second exclusive eastbound right-turn lane. Modify the existing traffic signal.
- **No. 5 – SR-57 NB Ramps at Lambert Road:** Construct a loop on-ramp on the south leg. Remove dual eastbound exclusive left-turn lanes. Widen and restripe to provide a shared eastbound through/right-turn lane and an exclusive eastbound right-turn lane. Reconstruct the existing on-ramp for a free westbound right-turn lane. Modify the existing traffic signal.

10.2 Existing Plus Project Traffic Conditions Recommended Improvements

10.2.1 Existing Plus Project – ICU

The results of the intersection capacity analyses presented previously in *Table 8-1* show that the proposed Project is expected to have a significant impact at one (1) of the twenty-seven (27) key study intersections under Existing Plus Project traffic conditions under ICU analysis. As such, the following intersection improvements are recommended to mitigate the significant impacts of the proposed Project under these conditions. However, these improvements are within Caltrans' right-of-way and are subject to Caltrans review and approval. In addition, Caltrans has no mechanism by which projects can contribute fair share fees to offset impacts.

- **No. 20 State College Boulevard at Imperial Highway:** Conduct minor widening and restripe the southbound approach to provide an exclusive southbound right-turn lane. Modify the median and restripe the No. 2 SB left-turn lane into a trap left turn lane. Modify the existing traffic signal. In conjunction with the lengthening of the southbound left-turn lane it is recommended that the No. 2 eastbound through lane along Imperial at the SR-57 southbound on-ramp be converted to a shared through/right-turn lane. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

10.2.2 Existing Plus Project – HCM

The results of the intersection capacity analyses presented previously in *Table 8-2* show that the proposed Project is expected to have a significant impact at one (1) of the twenty-seven (27) key study intersections under Existing Plus Project traffic conditions under HCM analysis. As such, the following intersection improvements are recommended to mitigate the significant impacts of the proposed Project under these conditions. However, these improvements are within Caltrans' right-of-way and are subject to Caltrans review and approval. In addition, Caltrans has no mechanism by which projects can contribute fair share fees to offset impacts.

- **No. 19 – Randolph Avenue at Imperial Highway:** Restripe the northbound shared left-turn/through lane to a through lane. Modify the existing traffic signal to convert the split phasing on Randolph Avenue to protected left-turn phasing and eight-phase operation. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

10.3 Year 2022 Plus Project Traffic Conditions Recommended Improvements

10.3.1 Year 2022 Plus Project – ICU

The results of the intersection capacity analyses presented previously in *Table 8-3* show that the proposed Project is expected to have a significant impact at one (1) of the twenty-seven (27) key study intersections under Year 2022 Plus Project traffic conditions under ICU analysis. As such, the following intersection improvements are recommended to mitigate the cumulative impacts of the

proposed Project under these conditions. However, these improvements are within Caltrans' right-of-way and are subject to Caltrans review and approval. In addition, Caltrans has no mechanism by which projects can contribute fair share fees to offset impacts.

- **No. 20 – State College Boulevard at Imperial Highway:** *Same as those identified in Section 10.2.1.* Conduct minor widening and restripe the southbound approach to provide an exclusive southbound right-turn lane. Modify the median and restripe the No. 2 SB left-turn lane into a trap left turn lane. Modify the existing traffic signal. In conjunction with the lengthening of the southbound left-turn lane it is recommended that the No. 2 eastbound through lane along Imperial at the SR-57 southbound on-ramp be converted to a shared through/right-turn lane. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

10.3.2 Year 2022 Plus Project – HCM

The results of the intersection capacity analyses presented previously in *Table 8-4* show that the proposed Project is expected to have a significant impact at three (3) of the twenty-six (27) key study intersections under Year 2022 Plus Project traffic conditions under HCM analysis. As such, the following intersection improvements are recommended to mitigate the significant impacts of the proposed Project under these conditions. However, these improvements are within Caltrans' right-of-way and are subject to Caltrans review and approval. In addition, Caltrans has no mechanism by which projects can contribute fair share fees to offset impacts.

- **No. 18 – Brea Boulevard at Imperial Highway:** Restripe the southbound approach to provide a third southbound through lane. Modify the existing traffic signal. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
- **No. 19 – Randolph Avenue at Imperial Highway:** *Same as those identified in Section 10.2.2.* Restripe the northbound shared left-turn/through lane to a through lane. Modify the existing traffic signal to convert the split phasing on Randolph Avenue to protected left-turn phasing and eight-phase operation. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
- **No. 20 – State College Boulevard at Imperial Highway:** Conduct minor widening and restripe the southbound approach to provide an exclusive southbound right-turn lane. Modify the median and restripe the No. 2 SB left-turn lane into a trap left turn lane. Modify the existing traffic signal. In conjunction with the lengthening of the southbound left-turn lane it is recommended that the No. 2 eastbound through lane along Imperial at the SR-57 southbound on-ramp be converted to a shared through/right-turn lane. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of

Caltrans will be implemented, a statement of overriding considerations may be required for this location.

10.4 Year 2040 Plus Project Traffic Conditions Recommended Improvements

10.4.1 Year 2040 Plus Project – ICU

The results of the intersection capacity analyses presented previously in *Table 8-5* show that the proposed Project is expected to have a significant impact at one (1) of the twenty-seven (27) key study intersections under Year 2040 Plus Project traffic conditions under ICU analysis. As such, the following intersection improvements are recommended to mitigate the cumulative impacts of the proposed Project under these conditions. However, these improvements are within Caltrans' right-of-way and are subject to Caltrans review and approval. In addition, Caltrans has no mechanism by which projects can contribute fair share fees to offset impacts.

- **No. 20 – State College Boulevard at Imperial Highway:** *Same as those identified in Sections 10.2.1 and 10.3.1.* Conduct minor widening and restripe the southbound approach to provide an exclusive southbound right-turn lane. Modify the median and restripe the No. 2 SB left-turn lane into a trap left turn lane. Modify the existing traffic signal. In conjunction with the lengthening of the southbound left-turn lane it is recommended that the No. 2 eastbound through lane along Imperial at the SR-57 southbound on-ramp be converted to a shared through/right-turn lane. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

10.4.2 Year 2040 Plus Project – HCM

The results of the intersection capacity analyses presented previously in *Table 8-6* show that the proposed Project is expected to have a significant impact at six (6) of the twenty-seven (27) key study intersections under Year 2040 Plus Project traffic conditions under HCM analysis. As such, the following intersection improvements are recommended to mitigate the significant impacts of the proposed Project under these conditions. However, these improvements are within Caltrans' right-of-way and are subject to Caltrans review and approval. In addition, Caltrans has no mechanism by which projects can contribute fair share fees to offset impacts.

- **No. 16 – Harbor Boulevard at Imperial Highway:** Widen the west leg to provide an exclusive eastbound right-turn lane. Modify the existing traffic signal to provide southbound right-turn overlap phasing. Right-of-way acquisition will be required. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
- **No. 18 – Brea Boulevard at Imperial Highway:** *Same as those identified in Section 10.3.2.* Restripe the southbound approach to provide a third southbound through lane. Modify the existing traffic signal. Since the proposed Project cannot guarantee that these improvements

which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

- **No. 19 – Randolph Avenue at Imperial Highway:** *Same as those identified in Sections 10.2.2 and 10.3.2.* Restripe the northbound shared left-turn/through lane to a through lane. Modify the existing traffic signal to convert the split phasing on Randolph Avenue to protected left-turn phasing and eight-phase operation. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
- **No. 20 – State College Boulevard at Imperial Highway:** *Same as those identified in Section 10.3.2.* Conduct minor widening and restripe the southbound approach to provide an exclusive southbound right-turn lane. Modify the median and restripe the No. 2 SB left-turn lane into a trap left turn lane. Modify the existing traffic signal. In conjunction with the lengthening of the southbound left-turn lane it is recommended that the No. 2 eastbound through lane along Imperial at the SR-57 southbound on-ramp be converted to a shared through/right-turn lane. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
- **No. 22 – SR-57 Ramps at Imperial Highway** Widen and/or restripe the off-ramp to provide a second exclusive northbound right-turn lane. Modify the existing traffic signal. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
- **No. 23 – Associated Road at Imperial Highway:** Restripe the exclusive southbound right-turn lane to a shared through/right-turn lane. Modify the existing traffic signal. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

TABLE 10-1

SUMMARY OF PROJECT IMPACTS AND RECOMMENDED IMPROVEMENTS BY SCENARIO

Key Intersections	Jurisdiction (City Location)	Improvement Description	Improvements by Scenario					
			Existing Plus Project		Year 2022 Plus Project		Year 2040 Plus Project	
			ICU Impact	HCM Impact	ICU Impact	HCM Impact	ICU Impact	HCM Impact
16. Harbor Boulevard at Imperial Highway	La Habra/ Fullerton (Caltrans)	- Widen to provide an exclusive EB right-turn lane. - Modify existing traffic signal to provide SB right-turn overlap phasing.	-- --	-- --	-- --	-- --	-- --	✓ ✓
18. Brea Boulevard at Imperial Highway	Caltrans (Brea)	- Restripe to provide a third SB through lane. - Modify existing traffic signal.	-- --	-- --	-- --	✓ ✓	-- --	X X
19. Randolph Avenue at Imperial Highway	Caltrans (Brea)	- Restripe the NB shared left-turn/through lane to a NB through lane. - Modify existing traffic signal to convert from split phase to eight-phase operation	-- --	✓ ✓	-- --	X X	-- --	X X
20. State College Boulevard at Imperial Highway	Caltrans (Brea)	- Conduct minor widening and restripe to provide exclusive SB right-turn lane. - Modify the median and restripe the No. 2 SB left-turn lane into a trap left turn lane. ⁴⁶ - Modify existing traffic signal.	✓ ✓ ✓	-- --	X X X	✓ ✓ ✓	X X X	X X X
22. SR-57 NB Ramps at Imperial Highway ⁴⁶	Caltrans (Brea)	- Widen and/or restripe to provide a second NB right-turn lane. - Modify existing traffic signal.	-- --	-- --	-- --	-- --	-- --	✓ ✓
23. Associated Road at Imperial Highway	Caltrans (Brea)	- Restripe the exclusive SB right-turn lane as a shared SB through/right-turn lane. - Modify existing traffic signal.	-- --	-- --	-- --	-- --	-- --	✓ ✓

Notes:

- ✓ = Denotes that the improvement is implemented in the scenario.
- X = Denotes that the improvement carries over from the previous scenario and is assumed to be already implemented.

⁴⁶ In conjunction with the lengthening of the southbound left-turn lane it is recommended that the No. 2 eastbound through lane along Imperial Highway at the SR-57 southbound on-ramp be converted to a shared through/right-turn lane.

10.5 Project-Related Fair-Share Contribution

The transportation impacts associated with the development of the Project were determined based on the future conditions analysis with and without the proposed Project. The key study locations forecast to operate at adverse levels of service are discussed below. As such, the proposed Project's "fair share" of the recommended improvements has been calculated for the key study intersections that are forecast to operate at adverse levels of service in the Existing Plus Project, Year 2022 Plus Project, and Year 2040 Plus Project traffic conditions. It should be noted that while fair share costs have been calculated Caltrans has no mechanism by which the Project can contribute fair share fees to offset the Project's impacts.

As such the Project may be expected to construct improvements and/or can be expected to pay a proportional "fair-share" of the improvement costs of the impacted intersection to mitigate the Project's traffic impact.

10.5.1 Existing Plus Project Traffic Conditions

Table 10-2 presents Project's fair-share contribution to construct the recommended improvements at two (2) of the study intersections projected to operate at an unacceptable LOS and/or inadequate queuing in the Existing Plus Project traffic conditions.

As presented in this *Table 10-2*, the first column (1) presents a total of all intersection peak hour movements for existing conditions. The second column (2) presents project only traffic. The third column (3) presents Existing traffic conditions with Project traffic. The fourth column (4) represents what percentage of total intersection peak hour traffic is Project-related traffic.

10.5.2 Year 2022 Plus Project Traffic Conditions

Table 10-3 is similar to *Table 10-2* and presents Project's fair-share contribution to construct the recommended improvements at three (3) of the study intersections projected to operate at an unacceptable LOS and/or inadequate queuing in the Year 2022 Plus Project traffic conditions.

It should be noted that the intersections of Randolph Avenue at Imperial Highway and State College Boulevard at Imperial Highway are shown to have 0.00% fair share since the recommended improvements are assumed to be implemented in Existing Plus Project traffic conditions.

10.5.3 Year 2040 Plus Project Traffic Conditions

Table 10-4 is similar to *Tables 10-2* and *10-3* and presents Project's fair-share contribution to construct the recommended improvements at six (6) of the study intersections projected to operate at an unacceptable LOS and/or inadequate queuing in the Year 2040 Plus Project traffic conditions.

It should be noted that the intersections of Brea Boulevard at Imperial Highway, Randolph Avenue at Imperial Highway, and State College Boulevard at Imperial Highway are shown to have 0.00% fair share since the recommended improvements are assumed to be implemented in Existing Plus Project and/or Year 2022 Plus Project traffic conditions.

TABLE 10-2
EXISTING PLUS PROJECT FAIR-SHARE CONTRIBUTION

Key Intersection		City/ Jurisdiction	Time Period	(1) Existing Traffic	(2) Project Traffic	(3) Existing Plus Project Traffic	(4) Project Fair-Share Percent⁴⁷

⁵⁰ Project fair-share percentage Column (4) = [Column (2)] / [Column (3) – Column (1)].

⁵¹ The Projects fair share has already been accounted for in Table 10-3.

⁵² The Projects fair share has already been accounted for in Table 10-2.

10.6 City of Brea Traffic Impact Fees

Based on information published on the City of Brea website, the Brea City Council adopted Ordinance 966 in July 1995, establishing Traffic Impact Fees for all new development in Brea and annexed portions of its sphere-of-influence. Based on a Transportation Improvement Nexus Program study conducted in 2011, the City Council adopted Resolution 2011-096, which updated the impact fees, which became effective February 4, 2012. These fees are required, in part, by Orange County's Measure M, a transportation initiative passed by voters in 1990. More importantly, these are fair-share based fees that will serve to offset, or mitigate, the traffic impacts caused by new development.

Review of **Table 10-3** indicates that the City's Traffic Impact Fee rate for residential land uses range from \$1,203 per dwelling unit to \$1,974 per dwelling unit. For Commercial uses the City's rate ranges between \$2.24 per gross square foot and \$2.53 per gross square foot.

Subject to confirmation by City staff, the proposed Project's Traffic Impact Fee totals \$788,496.00 based on a net increase of 149,625 SF of regional commercial uses along with 312 medium density residential units (i.e. $149,625 \text{ SF} \times \$2.24 \text{ per SF} = \$335,160$ and $312 \text{ DU} \times \$1,453 \text{ per DU} = \$453,336$). The precise fee will be determined upon issuance of Project building permits by the City of Brea Community Development Department.

In some cases, a developer may be required to make certain traffic improvements in addition to, or in-lieu of paying traffic impact fees. In this case, however, the total cost of traffic improvements and/or fees will not exceed the development's fair-share toward mitigating its own impacts.

With respect to project impacts at intersections under the jurisdiction of the City of Brea and Caltrans, it should also be noted that under CEQA, a fair share monetary contribution to a mitigation fund is adequate mitigation if the fund is tied to a reasonable plan that the relevant agency is committed to implementing. However, the City and Caltrans do not have mitigation fund programs in place for these improvements to which a development project in the City of Brea can contribute.

TABLE 10-3
CITY OF BREA TRAFFIC IMPACT FEE RATES⁵³

Land Use Category	Unit of Development	Fee
▪ Low density residential	Per dwelling unit	\$1,974
▪ Medium density residential	Per dwelling unit	\$1,453
▪ High density residential	Per dwelling unit	\$1,203
▪ Commercial, general, mixed use	Per gross square foot	\$2.53
▪ Regional commercial	Per gross square foot	\$2.24
▪ Office / industrial	Per gross square foot	\$1.25
▪ School	Student	\$0
▪ All other uses	Per trip end	\$89

11.0 SR-57 OFF-RAMP QUEUING ANALYSIS

A “turn pocket” queuing evaluation has been conducted for the SR-57 Freeway Off-Ramps at Lambert Road and Imperial Highway to determine the minimum required stacking/storage lengths for all off-ramp lanes.

The off-ramp queuing evaluation was conducted for Year 2022 Plus Project Traffic Conditions as well as Year 2040 Plus Project Traffic Conditions and the Average Queue methodology, which calculates the average queue value in terms of number of vehicles per lane. At signalized intersections, the storage length for left-turn and right-turn lanes may be based on one and one-half (1½) to two (2) times the average number of vehicles that would store per signal cycle⁵⁴. For the purposes of this traffic analysis, the minimum storage requirement for left-turn lanes and right-turn lanes was calculated by taking 1½ times the average queue length. (Minimum required storage = Q_{av} (feet) x 1.5).

Table 11-1 identifies the minimum required stacking/storage lengths for the off-ramp lanes at the four (4) ramp intersections of SR-57 Freeway at Lambert Road and Imperial Highway for Year 2022 Plus Project Traffic conditions. It should be noted that the reported storage provided for the SR-57 Freeway ramps is estimated and is subject to confirmation upon final design and completion of the SR-57 Lambert Road Interchange project.

Table 11-2 presents similar information summarized in *Table 11-1* but for Year 2040 Plus Project Traffic conditions.

The stacking/storage requirements shown in *Tables 11-1* and *11-2* are required at a minimum to ensure that vehicles do not queue beyond the off-ramp causing interruptions to through traffic on the mainline of the SR-57 Freeway.

Based on the estimated storage now provided on the off-ramp intersections at the SR-57 Freeway at Lambert Road and Imperial Highway, adequate storage is provided. Therefore, no modifications to the freeway off-ramps are required.

Appendix G presents the Synchro queuing worksheets for the Caltrans freeway off-ramps.

⁵⁴ Source: Highway Design Manual, Intersections at Grade, page 400-9, CALTRANS

TABLE 11-1
YEAR 2022 PEAK HOUR FREEWAY OFF-RAMP QUEUING ANALYSIS

Study Ramp Intersection	(1) Year 2022 Plus Project Traffic Conditions						
	Estimated Storage Provided (feet)	AM Peak Hour		PM Peak Hour		Saturday MD Peak Hour	
		Max. Queue/ Min. Storage Required ⁵⁵	Adequate Storage (Yes / No)	Max. Queue/ Min. Storage Required ⁵⁵	Adequate Storage (Yes / No)	Max. Queue/ Min. Storage Required ⁵⁵	Adequate Storage (Yes / No)
4. SR-57 Southbound Ramps at Lambert Road							
<i>Southbound Left -Turn</i>	1,120'	672'	Yes	198'	Yes	344'	Yes
<i>Southbound Right-Turn</i>	1,120'	407'	Yes	483'	Yes	716'	Yes
5. SR-57 Northbound Ramps at Lambert Road							
<i>Northbound Left -Turn</i>	1,595' ⁵⁶	483'	Yes	179'	Yes	252'	Yes
<i>Northbound Right-Turn</i>	525' ⁵⁷	432'	Yes	123'	Yes	176'	Yes
21. SR-57 Southbound Ramps at Imperial Highway							
<i>Southbound Left -Turn</i>	1,300'	206'	Yes	474'	Yes	542'	Yes
<i>Southbound Left/Right-Turn</i>	1,300'	206'	Yes	474'	Yes	542'	Yes
<i>Southbound Right-Turn</i>	1,300' ⁵⁸	203'	Yes	465'	Yes	554'	Yes

⁵⁵ Maximum queue in feet (ft) is calculated by multiplying the *Average Queue* by a factor of 1.5.

⁵⁶ Subject to final design of the SR-57 Lambert Road Interchange project.

⁵⁷ It has been assumed that the storage provided is 525 feet but is subject to final design of the SR-57 Lambert Road Interchange project.

⁵⁸ The southbound right-turn pocket consists of approximately 265 feet of storage; however, an additional 1,035 feet of storage from the shared left/right-turn lane can accommodate the remaining vehicles.

⁶⁷ The northbound right-turn pocket consists of approximately 470 feet of storage; however, an additional 800 feet of storage from the second northbound left can accommodate the remaining vehicles.

⁶⁸ The northbound right-turn pocket consists of approximately 500 feet of storage; however, an additional 800 feet of storage from the shared left/thru/right-turn lane can accommodate the remaining vehicles.

12.0 CONGESTION MANAGEMENT PROGRAM (CMP) COMPLIANCE ASSESSMENT

This analysis is consistent with the requirements and procedures outlined in the current *Orange County Congestion Management Program (CMP)*. The CMP requires that a traffic impact analysis be conducted for any project generating 2,400 or more daily trips, or 1,600 or more daily trips for projects that directly access the CMP Highway System (HS). As noted in *Section 5.0* of this traffic study, the proposed Project is forecast to generate approximately 4,140 weekday net daily trip-ends and 4,031 net Saturday daily trip-ends and thus meets the criteria requiring a CMP TIA.

The CMPHS includes specific roadways, which include State Highways and Super Streets, which are now known as Smart Streets. Therefore, the CMP TIA analysis requirements relate to the potential impacts only on the specified CMPHS, which in this case includes Imperial Highway. As described in the "Radius of Development Influence" section of the CMP TIA, the study area (i.e. CMP intersections) is recommended to be defined by the CMP links which have a project impact of more than three percent of their daily LOS "E" capacity.

Table 12-1 and **12-2** summarizes the Project percentage impact CMP analysis for seven (7) key roadway segments in the vicinity of the proposed Project along Imperial Highway for Weekday daily and Weekend (Saturday) daily, respectively. Column one (1) of **Table 12-1** shows the CMP LOS "E" Capacity for each roadway segment, column two (2) shows the Project weekday ADT for each roadway segment, column three (3) shows the Project ADT LOS "E" capacity percentages for each roadway segment and column (4) shows whether or not added project traffic meets or exceeds the "three percent" limit.

Review of **Table 12-1** and **12-2** shows that the three percent limit is exceeded on one (1) the seven (7) roadway segments, Imperial Highway east of State College Boulevard (Segment 4), thus requiring a CMP analysis.

There are four (4) CMP intersections in close proximity to the site which are as follows:

<u>Study Intersection</u>	<u>Location</u>
16	Harbor Boulevard at Imperial Highway
20	State College Boulevard at Imperial Highway
21	SR-57 SB Ramps at Imperial Highway
22	SR-57 NB Ramps at Imperial Highway

Tables 12-3, 12-4 and **12-5** present the Existing Plus Project, Year 2022 Plus Project, and Year 2040 Plus Project level of service results based on the CMP thresholds, respectively. As stated previously, a project causes a significant impact if it causes the CMP facility to operate worse than a LOS E, or the project increases the ICU value by more than 0.10 if the CMP facility operates at LOS F without the project.

Review of *Table 12-3* shows that the Project will impact the intersection of State College Boulevard at Imperial Highway during the Saturday Midday peak hour under Existing Plus Project traffic conditions. It should be noted that this impact is consistent with Existing Plus Project impacts discussed previously in *Section 8.1.1*. Consistent with the findings in *Section 8.1.1* for this location, with implementation of recommended improvements detailed in *Section 10.2.1*, the impact of the proposed Project will be offset.

Review of *Tables 12-4* and *12-5* shows that the Project will not impact any of the CMP locations under Year 2022 Plus Project and Year 2040 Plus Project traffic conditions. However, levels of service with recommended improvements for the intersection of State College Boulevard at Imperial Highway have been provided based on Existing Plus Project. As shown, with implementation of recommended improvements detailed in *Section 10.2.1*, the cumulative impact of the proposed Project will be offset in the Year 2022 and Year 2040.

TABLE 12-1
PROJECT PERCENTAGE RADIUS OF INFLUENCE CMP ANALYSIS – WEEKDAY

Roadway Segment		(1) CMP LOS “E” Capacity	(2) Weekday Project ADT	(3) Percentage (3) = (2) ÷ (1)	(4) Radius of Influence (Yes/No)
1.	Imperial Highway, West of Puente Street	56,300	488	1%	No

⁷¹ It is noted that the mitigation improves to pre-Project conditions in the Saturday midday peak hour.

13.0 CALTRANS FREEWAY ANALYSIS

Caltrans requires the use of analysis methods provided in the Highway Capacity Manual (*HCM*) for the analysis of basic freeway segments. Caltrans “endeavors to maintain a target LOS at the transition between LOS “C” and LOS “D” on State highway facilities”; it does not require that LOS “D” (shall) be maintained. However, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. For this analysis, LOS D is the target level of service standard and will be utilized to assess project impacts at the key study freeway segments. Based on Caltrans criteria, a Project’s impact is considered significant if the Project causes the LOS to change from an acceptable LOS (i.e. LOS D or better) to a deficient LOS (i.e. LOS E or F) or increase the density on a facility operating at an unacceptable level.

13.1 Basic Freeway Segment Analysis

Basic Freeway Segment Analysis for freeway segments was conducted for the following six (6) Caltrans freeway segments in the vicinity of the proposed Project:

1. SR-57 Northbound, south of Imperial Highway
2. SR-57 Northbound, south of Lambert Road
3. SR-57 Northbound, north of Lambert Road
4. SR-57 Southbound, north of Lambert Road
5. SR-57 Southbound, south of Lambert Road
6. SR-57 Southbound, south of Imperial Highway

13.1.1 Existing Basic Freeway Segment Capacity Analysis

Table 13-1 summarizes the peak hour level of service results at the aforementioned six (6) key freeway segments for Existing traffic conditions. Review of *Table 13-1* indicates that all (6) key freeway segments currently operate at LOS C or better during the AM and/or PM peak hours.

Per Caltrans guidelines, the following is stated in the *Caltrans Guide for the Preparation of Traffic Impact Studies, December 2002*:

“The following criterion is a starting point in determining when a TIS is needed. When a project:

- 1. Generates over 100 peak hour trips assigned to a State highway facility.....*
- 2. Generates 50 to 100 peak hour trips assigned to a State highway facility and noticeable delay approaching LOS C or D.....*
- 3. Generates 1 to 49 peak hour trips assigned to a State highway facility and noticeable delay approaching LOS E or F.....”*

Based on the Caltrans criteria above and the results of the basic freeway segment analysis for Existing traffic conditions as presented in *Table 13-1*, it is determined that no additional analysis is needed for the six (6) key freeway segments since the Project does not generate 50 to 100 peak hour trips assigned to a state highway facility and these segments are forecast to operate at an acceptable LOS D or better during the AM and PM peak hours under Existing traffic conditions.

Appendix H contains the Basic Freeway Segment Analysis calculation worksheets for the six (6) freeway segments for Existing traffic conditions.

TABLE 13-1
EXISTING PEAK HOUR FREEWAY MAINLINE CAPACITY ANALYSIS SUMMARY

Key Basic Freeway Segment	Time Period	Lanes	Project Trips	(1) Existing Traffic Conditions		
				Peak Hour Volume (pc/h/ln)	Density (pc/mi/ln)	LOS
1. SR-57 northbound <i>south of</i> Imperial Highway	AM	5	26	1,476	22.7	C
	PM		44	1,199	18.4	C
	Sat MD		27	1,455	22.4	C
2. SR-57 northbound <i>south of</i> Lambert Road	AM	6	8	1,104	17.0	B
	PM		9	975	15.0	B
	Sat MD		16	1,062	16.3	B
3. SR-57 northbound <i>north of</i> Lambert Road	AM	4	12	1,464	22.6	C
	PM		13	1,454	22.4	C
	Sat MD		24	1,461	22.5	C
4. SR-57 southbound <i>north of</i> Lambert Road	AM	4	14	1,590	24.7	C
	PM		22	1,457	22.4	C
	Sat MD		15	1,696	26.6	D
5. SR-57 southbound <i>south of</i> Lambert Road	AM	4	9	1,396	21.5	C
	PM		16	1,414	21.8	C
	Sat MD		10	1,407	21.6	C
6. SR-57 southbound <i>south of</i> Imperial Highway	AM	4	22	1,341	20.6	C
	PM		22	1,428	22.0	C
	Sat MD		42	1,434	22.1	C

Notes:

- pc/mi/ln = Passenger cars per mile per lane (density)
- **Bold Volume/Density/LOS values** indicate adverse service levels based on the Caltrans LOS Criteria

14.0 SPECIAL ISSUES

14.1 Imperial Highway Collision History

Caltrans has indicated an increased number of collisions at Randolph Avenue/Imperial Highway and State College Boulevard/Imperial Highway and has therefore, requested further analysis at these locations. Per the direction of the City of Brea and Caltrans, five years of collision history has been research via the Statewide Integrated Traffic Records System (SWITRS) for the intersections of Randolph Avenue at Imperial Highway and State College Boulevard at Imperial Highway. The data was compiled from November 2014 through November 2018. Below presents the accident data for State College Boulevard at Imperial Highway. Review of this data shows a collision between a motorists and pedestrian that may be correctable via signal upgrades to the existing traffic signal equipment as necessary to enhance safety. This could include updating the signal to be compliant with current ADA standards (i.e. truncated domes, pedestrian count down heads, etc.). In addition, collisions related to lane changes ranged between 2 to 6 collisions per year. These collisions are due to vehicles making erratic lane changes to try and enter the SR-57 SB On-Ramp along Imperial Highway. These collisions could be corrected via modifying the SR-57 SB On-Ramp to allow for two lanes onto the freeway. It is recommended that the east bound approach be modified to accommodate two through lanes, a shared through/right-turn lane and an exclusive right-turn lane.

State College Boulevard at Imperial Highway		
Time Period	Total	Correctable
11/14 through 11/15	31	1 (Auto/Ped)
11/15 through 11/16	29	6 (Lane Change)
11/16 through 11/17	27	3 (Lane Change)
11/17 through 11/18	31	2 (Lane Change)

Below presents the accident data for Randolph Avenue at Imperial Highway. Review of this data shows no correctable collisions. Therefore, no improvements are recommended. However, it should be noted that Caltrans has an on-going safety improvement project along Imperial Highway to upgrade traffic signal indications and pedestrian facilities and that it is expected that those improvements once completed would reduce the risk of future crashes.

Randolph Avenue at Imperial Highway		
Time Period	Total	Correctable
11/14 through 11/15	7	0
11/15 through 11/16	8	0
11/16 through 11/17	5	0
11/17 through 11/18	7	0

15.0 SUMMARY OF FINDINGS AND CONCLUSIONS

- **Project Description** – Brea Mall Mixed Use Project (hereinafter referred to as Project) in the City of Brea. The Project consists of redevelopment of 17.5-acre in the southwest portion of the Brea Mall property that includes the Sears parcel and adjoining transition areas adjacent to Nordstrom and Macy's. The Project involves demolishing 161,990 square-foot (SF) of the Sears department store and associated auto center and roughly 12 acres of surface parking in order to development 183,615 SF of new retail space, a 128,000 SF health club, and a 312-unit seven-story apartment building. The proposed Project is located west of the State Route (SR) 57 Freeway and is generally bounded by State College Boulevard to the east, Imperial Highway (State Route 91) to the south, Randolph Avenue to the west, and Birch Street to the north. The Project is expected to be developed in several phases with the Year 2022 utilized to assess the Project's potential traffic impacts at full occupancy within a near-term cumulative traffic setting. The Brea Mall can be accessed from three of the four surrounding streets bordering the subject property, State College Boulevard, Randolph Avenue, and Birch Street; no vehicular access is provided from Imperial Highway. Vehicular access from Randolph Avenue is currently provided by two (2) signalized intersections, whereas one (1) signalized access is provided along Birch Street. From State College Boulevard, three (3) signalized intersections provide access to the Brea Mall. No change in access to the Brea Mall is proposed as a part of the Project.
- **Study Scope** – The following twenty-nine (29) key study intersections were selected for detailed peak hour level of service analyses under Existing Traffic Conditions, Existing Plus Project Traffic Conditions, Year 2022 Cumulative Traffic Conditions, Year 2022 Cumulative Plus Project, Year 2040 Traffic Conditions, and Year 2040 Plus Project Traffic Conditions. It should be noted that cities that border the intersection but do not have governing jurisdictions are included in parentheses.

Key Intersection	Applicable Jurisdiction (City Location)				
	Caltrans	City of Brea	City of La Habra	City of Fullerton	City of Placentia
1. Puente Street at Lambert Road	--	Brea	--	--	--
2. Brea Boulevard at Lambert Road	--	Brea	--	--	--
3. State College Boulevard at Lambert Road	--	Brea	--	--	--
4. SR-57 SB Ramps at Lambert Road	Caltrans	(Brea)	--	--	--
5. SR-57 NB Ramps at Lambert Road	Caltrans	(Brea)	--	--	--
6. Santa Fe Road/Kraemer Boulevard at Lambert Road	--	Brea	--	--	--
7. Brea Boulevard at Birch Street	--	Brea	--	--	--
8. Randolph Avenue at Birch Street	--	Brea	--	--	--
9. State College Boulevard at Birch Street	--	Brea	--	--	--
10. S Associated Road at Birch Street	--	Brea	--	--	--
11. N Associated Road at Birch Street	--	Brea	--	--	--
12. Kraemer Boulevard at Birch Street	--	Brea	--	--	--
13. Randolph Avenue at Madison Way	--	Brea	--	--	--
14. Randolph Avenue at Brea Mall	--	Brea	--	--	--

Key Intersection	Applicable Jurisdiction (City Location)				
	Caltrans	City of Brea	City of La Habra	City of Fullerton	City of Placentia
15. Brea Mall South at State College Boulevard	--	Brea	--	--	--
16. Harbor Boulevard at Imperial Highway ⁷²	Caltrans	--	(La Habra)	(Fullerton)	--
17. Puente Street at Imperial Highway	Caltrans	(Brea)	--	(Fullerton)	--
18. Brea Boulevard at Imperial Highway	Caltrans	(Brea)			
19. Randolph Avenue at Imperial Highway	Caltrans	(Brea)	--	--	--
20. State College Blvd at Imperial Highway ⁷²	Caltrans	(Brea)	--	--	--

27. State College Boulevard at Bastanchury Road	--	--	--	Fullerton	--
28. Placentia Avenue at Bastanchury Road	--	--	--	--	Placentia
29. Kraemer Boulevard at Bastanchury Road	--	--	--	--	Placentia

- **Existing Traffic Conditions ICU** – The intersection of State College Boulevard at Imperial Highway currently operates at an unacceptable LOS during the Weekend (Saturday) Midday peak hour. The remaining twenty-six (26) of the twenty-seven (27) key study intersections evaluated under ICU analysis currently operate at an acceptable levels of service during the Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hours.
- **Existing Traffic Conditions HCM** – The intersection of State College Boulevard at Imperial Highway currently operates at an unacceptable LOS during the Weekend (Saturday) Midday peak hour. The remaining twenty-six (26) of the twenty-seven (27) key study intersections evaluated under HCM analysis currently operate at an acceptable levels of service during the Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hours.
- **Project Trip Generation** – The proposed Project is forecast to generate approximately 34,957 Weekday daily trips, with 1,072 trips (634 inbound, 438 outbound) produced in the Weekday AM peak hour and 3,671 trips (1,840 inbound, 1,831 outbound) produced in the Weekday PM peak hour on a “typical” weekday. The proposed Project with the existing Brea Mall is forecast to generate 43,214 Saturday daily trips, with 4,645 trips (2,358 inbound, 2,287 outbound) produced in the Saturday Midday peak hour on a “typical” Saturday.

When the proposed Project is compared to an existing fully occupied Brea Mall site, the proposed Project is forecast to generate 4,140 more Weekday daily trips, 315 more Weekday AM peak hour trips, 424 more Weekday PM peak hour trips, 4,031 more Saturday daily trips, and 441 more Saturday Midday peak hour trips. The potential impact of these added Project trips has been evaluated in this traffic analysis.

⁷² Orange County Congestion Management Program (CMP) intersection.

- ***Related Projects Traffic Characteristics*** – Seven (7) related projects were considered as part of the cumulative background setting. The seven (7) related projects are forecast to generate 28,114 weekday daily trips, with 2,303 trips (1,134 inbound, 1,169 outbound) anticipated during the weekday AM peak hour and 2,571 trips (1,272 inbound, 1,299 outbound) produced during the weekday PM peak hour. On a weekend (Saturday), the related projects are forecast to generate 27,156 weekend daily trips, with 2,527 trips (1,301 inbound, 1,226 outbound) anticipated during the weekend midday peak hour..
- ***Existing Plus Project Traffic Conditions ICU*** – The proposed Project significantly impact one (1) of the twenty-seven (27) key study intersections during the Weekend (Saturday) Midday peak hour when compared to the LOS standards and significant impact criteria specified in this report. The one (1) location significantly impacted by the proposed Project is as follows:

Key Intersection

20. State College Boulevard at Imperial Highway

However, implementation of recommended improvements will off-set the incremental impact of Project-related traffic. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

- ***Existing Plus Project Traffic Conditions HCM*** – The proposed Project will significantly impact one (1) of the twenty-seven (27) key study intersections during the Weekend (Saturday) Midday peak hour when compared to the LOS standards and significant impact criteria specified in this report. The one (1) location significantly impacted by the proposed Project is as follows:

Key Intersection

19. Randolph Avenue at Imperial Highway

However, implementation of recommended improvements will off-set the incremental impact of Project-related traffic. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

- ***Year 2022 Cumulative Traffic Conditions Plus Project ICU*** – The proposed Project will have a cumulative significant impact at one (1) of the twenty-seven (27) key study intersections during the Weekend (Saturday) Midday peak hour when compared to the LOS standards and significant impact criteria specified in this report. The one (1) location cumulatively impacted by the proposed Project is as follows:

Key Intersection

20. State College Boulevard at Imperial Highway

However, implementation of recommended improvements will off-set the incremental impact of Project-related traffic.

- ***Year 2022 Cumulative Traffic Conditions Plus Project HCM*** – The proposed Project will have a cumulative significant impact at three (3) of the twenty-seven (27) key study intersections during the Weekend (Saturday) Midday peak hours when compared to the LOS standards and significant impact criteria specified in this report. The three (3) location cumulatively impacted by the proposed Project is as follows:

Key Intersection

- 18. Brea Boulevard at Imperial Highway
- 19. Randolph Avenue at Imperial Highway
- 20. State College Boulevard at Imperial Highway

However, implementation of recommended improvements will off-set the incremental impact of Project-related traffic. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

- ***Year 2040 Traffic Conditions Plus Project ICU*** – The proposed Project will have a cumulative significant impact at one (1) of the twenty-seven (27) key study intersections during the Weekend (Saturday) Midday peak hours when compared to the LOS standards and significant impact criteria specified in this report. The one (1) location cumulatively impacted by the proposed Project is as follows:

Key Intersection

- 20. State College Boulevard at Imperial Highway

However, implementation of recommended improvements will off-set the incremental impact of Project-related traffic. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

- ***Year 2040 Traffic Conditions Plus Project HCM*** – The proposed Project will cumulatively impact five (5) of the twenty-seven (27) key study intersections, when compared to LOS standards and significant impact criteria specified in this report. The five (5) locations cumulatively impacted by the proposed Project under Year 2040 Plus Project traffic conditions are as follows:

Key Intersection

- 18. Brea Boulevard at Imperial Highway
- 19. Randolph Avenue at Imperial Highway
- 20. State College Boulevard at Imperial Highway
- 22. SR-57 NB Ramps at Imperial Highway
- 23. Associated Road at Imperial Highway

However, implementation of recommended improvements will off-set the incremental impact of Project-related traffic. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

- ***Existing Plus Project Recommended Improvements (ICU)*** – The proposed Project is expected to have a significant impact at one (1) of the twenty-seven (27) key study intersections under Existing Plus Project traffic conditions under ICU analysis. As such, the following intersection improvements are recommended to mitigate the significant impacts of the proposed Project under these conditions:
 - **No. 20 State College Boulevard at Imperial Highway:** Conduct minor widening and restripe the southbound approach to provide an exclusive southbound right-turn lane. Modify the median and restripe the No. 2 SB left-turn lane into a trap left turn lane. Modify the existing traffic signal. In conjunction with the lengthening of the southbound left-turn lane it is recommended that the No. 2 eastbound through lane along Imperial at the SR-57 southbound on-ramp be converted to a shared through/right-turn lane. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
- ***Existing Plus Project Recommended Improvements (HCM)*** – The proposed Project is expected to have a significant impact at one (1) of the twenty-seven (27) key study intersections under Existing Plus Project traffic conditions under HCM analysis. As such, the following intersection improvements are recommended to mitigate the significant impacts of the proposed Project under these conditions:
 - **No. 19 – Randolph Avenue at Imperial Highway:** Restripe the northbound shared left-turn/through lane to a through lane. Modify the existing traffic signal to convert the split phasing on Randolph Avenue to protected left-turn phasing and eight-phase operation. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
- ***Year 2022 Cumulative Plus Project Recommended Improvements (ICU)*** – The proposed Project is expected to have a significant impact at one (1) of the twenty-seven (27) key study intersections under Year 2022 Plus Project traffic conditions under ICU analysis. As such, the following intersection improvements are recommended to mitigate the cumulative impacts of the proposed Project under these conditions:
 - **No. 20 – State College Boulevard at Imperial Highway:** *Same as those identified in Existing Plus Project recommended improvements.* Conduct minor widening and restripe the southbound approach to provide an exclusive southbound right-turn lane. Modify the median and restripe the No. 2 SB left-turn lane into a trap left turn lane. Modify the existing traffic signal. In conjunction with the lengthening of the southbound left-turn lane it is recommended that the No. 2 eastbound through lane

along Imperial at the SR-57 southbound on-ramp be converted to a shared through/right-turn lane. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

- ***Year 2022 Cumulative Plus Project Recommended Improvements (HCM)*** – The proposed Project is expected to have a significant impact at three (3) of the twenty-six (27) key study intersections under Year 2022 Plus Project traffic conditions under HCM analysis. As such, the following intersection improvements are recommended to mitigate the significant impacts of the proposed Project under these conditions:
 - **No. 18 – Brea Boulevard at Imperial Highway:** Restripe the southbound approach to provide a third southbound through lane. Modify the existing traffic signal. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
 - **No. 19 – Randolph Avenue at Imperial Highway:** Restripe the northbound shared left-turn/through lane to a through lane. Modify the existing traffic signal to convert the split phasing on Randolph Avenue to protected left-turn phasing and eight-phase operation. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
 - **No. 20 – State College Boulevard at Imperial Highway:** Conduct minor widening and restripe the southbound approach to provide an exclusive southbound right-turn lane. Modify the median and restripe the No. 2 SB left-turn lane into a trap left turn lane. Modify the existing traffic signal. In conjunction with the lengthening of the southbound left-turn lane it is recommended that the No. 2 eastbound through lane along Imperial at the SR-57 southbound on-ramp be converted to a shared through/right-turn lane. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
- ***Year 2040 Plus Project Recommended Improvements (ICU)*** – The proposed Project is expected to have a significant impact at one (1) of the twenty-seven (27) key study intersections under Year 2040 Plus Project traffic conditions under ICU analysis. As such, the following intersection improvements are recommended to mitigate the cumulative impacts of the proposed Project under these conditions:
 - **No. 20 – State College Boulevard at Imperial Highway:** *Same as those identified in Existing Plus Project and Year 2022 Plus Project recommended improvements.* Conduct minor widening and restripe the southbound approach to provide an exclusive southbound right-turn lane. Modify the median and restripe the No. 2 SB left-turn lane into a trap left turn lane. Modify the existing traffic signal. In

conjunction with the lengthening of the southbound left-turn lane it is recommended that the No. 2 eastbound through lane along Imperial at the SR-57 southbound on-ramp be converted to a shared through/right-turn lane. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

- ***Year 2040 Plus Project Recommended Improvements (HCM)*** – The proposed Project is expected to have a significant impact at six (6) of the twenty-seven (27) key study intersections under Year 2040 Plus Project traffic conditions under HCM analysis. As such, the following intersection improvements are recommended to mitigate the significant impacts of the proposed Project under these conditions:
 - **No. 16 – Harbor Boulevard at Imperial Highway:** Widen the west leg to provide an exclusive eastbound right-turn lane. Modify the existing traffic signal to provide southbound right-turn overlap phasing. Right-of-way acquisition will be required. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
 - **No. 18 – Brea Boulevard at Imperial Highway:** *Same as those identified in Year 2022 Plus Project recommended improvements.* Restripe the southbound approach to provide a third southbound through lane. Modify the existing traffic signal. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
 - **No. 19 – Randolph Avenue at Imperial Highway:** *Same as those identified in Year 2022 Plus Project recommended improvements.* Restripe the northbound shared left-turn/through lane to a through lane. Modify the existing traffic signal to convert the split phasing on Randolph Avenue to protected left-turn phasing and eight-phase operation. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
 - **No. 20 – State College Boulevard at Imperial Highway:** *Same as those identified in Year 2022 Plus Project recommended improvements.* Conduct minor widening and restripe the southbound approach to provide an exclusive southbound right-turn lane. Modify the median and restripe the No. 2 SB left-turn lane into a trap left turn lane. Modify the existing traffic signal. In conjunction with the lengthening of the southbound left-turn lane it is recommended that the No. 2 eastbound through lane along Imperial at the SR-57 southbound on-ramp be converted to a shared through/right-turn lane. Since the proposed Project cannot guarantee that these

improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.

- **No. No. 22 – SR-57 Ramps at Imperial Highway** Widen and/or restripe the off-ramp to provide a second exclusive northbound right-turn lane. Modify the existing traffic signal. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
- **No. 23 – Associated Road at Imperial Highway:** Restripe the exclusive southbound right-turn lane to a shared through/right-turn lane. Modify the existing traffic signal. Since the proposed Project cannot guarantee that these improvements which are under the jurisdiction of Caltrans will be implemented, a statement of overriding considerations may be required for this location.
- ***Site Access Assessment*** – The intersections of Randolph Avenue at Madison Way, Randolph Avenue at Brea Mall, and Brea Mall South at State College Boulevard are forecast to operate at LOS D or better during the Weekday AM, Weekday PM, and Weekend (Saturday) Midday peak hours in all traffic conditions.
- ***Year 2040 Project Fair-Share Contribution*** –The Project can be expected to pay a proportional “fair-share” of the recommended improvements at the six (6) impacted intersections, which are identified below. It should be noted that while fair share costs have been calculated Caltrans has no mechanism by which the Project can contribute fair share fees to offset the Project’s impacts.

<u>Key Intersection</u>	<u>City/ Jurisdiction</u>	<u>Project Fair-Share Contribution</u>
16. Harbor Boulevard at Imperial Highway	La Habra/Fullerton/Caltrans	3.77%
18. Brea Boulevard at Imperial Highway	Brea/Caltrans	12.04%
19. Randolph Avenue at Imperial Highway	Brea/Caltrans	100.00%
20. State College Boulevard at Imperial Highway	Brea/Caltrans	100.00%
22. SR-57 NB Ramps at Imperial Highway	Brea/Caltrans	11.20%
23. Associated Road at Imperial Highway	Brea/Caltrans	5.09%

- ***Traffic Impact Fees*** – The proposed Project’s Traffic Impact Fee totals \$788,496.00 based on a net increase of 149,625 SF of regional commercial uses along with 312 medium density residential units (i.e. 149,625 SF x \$2.24 per SF = \$335,160 and 312 DU x \$1,453 per DU = \$453,336). The precise fee will be determined upon issuance of Project building permits by the City of Brea Community Development Department.
- ***SR-57 Off-Ramp Queuing Analysis*** - Based on the estimated storage now provided on the off-ramp intersections at the SR-57 Freeway at Lambert Road and Imperial Highway, adequate storage is provided. Therefore, no modifications to the freeway off-ramps are required.

- ***CMP Compliance Assessment*** – The proposed Project will impact one CMP location, State College Boulevard at Imperial Highway, under Existing Plus Project traffic conditions. It should be noted that this impact is consistent with the Existing Plus Project impacts discussed previously in Section 8.1.1. Consistent with the findings presented in Section 8.1.1 for this location, with implementation of recommended improvements discussed in Section 10.2.1, the impact of the proposed Project will be offset. Under Year 2022 Plus Project traffic conditions and Year 2040 Plus Project traffic conditions, the proposed Project will not impact any of the CMP intersections.
- ***Caltrans Basic Freeway Analysis*** – The six (6) key freeway segments are forecast to operate at acceptable levels of service in Existing traffic conditions.
- ***Special Issues*** – Caltrans has indicated an increased number of collisions at Randolph Avenue/Imperial Highway and State College Boulevard/Imperial Highway and has therefore, requested further analysis at these locations. Per the direction of the City of Brea and Caltrans, five years of collision history has been research via the Statewide Integrated Traffic Records System (SWITRS) for the intersections of Randolph Avenue at Imperial Highway and State College Boulevard at Imperial Highway. The data was compiled from November 2014 through November 2018. Below presents the accident data for State College Boulevard at Imperial Highway. Review of this data shows a collision between a motorists and pedestrian that may be correctable via signal upgrades to the existing traffic signal equipment as necessary to enhance safety. This could include updating the signal to be compliant with current ADA standards (i.e. truncated domes, pedestrian count down heads, etc.). In addition, collisions related to lane changes ranged between 2 to 6 collisions per year. These collisions are due to vehicles making erratic lane changes to try and enter the SR-57 SB On-Ramp along Imperial Highway. These collisions could be corrected via modifying the SR-57 SB On-Ramp to allow for two lanes onto the freeway. It is recommended that the east bound approach be modified to accommodate two through lanes, a shared through/right-turn lane and an exclusive right-turn lane.

State College Boulevard at Imperial Highway		
Time Period	Total	Correctable
11/14 through 11/15	31	1 (Auto/Ped)
11/15 through 11/16	29	6 (Lane Change)
11/16 through 11/17	27	3 (Lane Change)
11/17 through 11/18	31	2 (Lane Change)

Below presents the accident data for Randolph Avenue at Imperial Highway. Review of this data shows no correctable collisions. Therefore, no improvements are recommended. However, it should be noted that Caltrans has an on-going safety improvement project along Imperial Highway to upgrade traffic signal indications and pedestrian facilities and that it is expected that those improvements once completed would reduce the risk of future crashes.

Randolph Avenue at Imperial Highway		
Time Period	Total	Correctable
11/14 through 11/15	7	0
11/15 through 11/16	8	0

11/16 through 11/17	5	0
11/17 through 11/18	7	0

APPENDIX A

TRAFFIC STUDY SCOPE OF WORK

MEMORANDUM

To: Mr. Michael Ho, P.E.
Public Works Department
City of Brea

Date: October 15, 2019

From: Richard E. Barretto, P.E., Principal
LLG Ref: 2.19.4099.1
Linscott, Law & Greenspan, Engineers

Subject: ***Traffic Impact Analysis Scope of Work for Brea Mall Expansion Project
Brea, California***

Linscott, Law & Greenspan, Engineers (LLG) is pleased to submit the following Traffic Impact Analysis Scope of Work for the proposed Brea Mall Expansion project in the City of Brea for your review and approval. The work program summarized below is based on our current experience within the City and prior coordination efforts with City staff. In addition, the scope considers discussions with Caltrans staff at our coordination meeting of September 17, 2019, as well as comments provided by City staff on October 3, 2019.

Traffic Study Scope of Work

The Traffic Impact Analysis for the Brea Mall Expansion Project (herein after referred to as Project) will satisfy the traffic impact requirements of the City of Brea and will be consistent with the requirements and procedures outlined in the most current *Congestion Management Program (CMP) for Orange County*. Given the location of the Project site, the criteria outlined in the current Caltrans *Guide for the Preparation of Traffic Impact Studies* will also be considered.

A. Project Location: The Brea Mall Expansion Project is located in the southwest quadrant of the Brea Mall along Randolph Avenue and Imperial Highway in the City of Brea, California. **Figure 1-1** presents a Vicinity Map that illustrates the general location of the Project and surrounding street system. **Figure 2-1** is an existing aerial photograph of the Project site.

B. Project Description:

Existing Brea Mall

The existing Brea Mall site is 1,291,433 square feet (SF) of Gross Leasable Area (GLA) consisting of several major department stores and a mixture of retail shops and restaurant/food uses. It should be noted that the first floor of the vacant Sears department store has been re-occupied by Q's fashion retail store and the second story totaling 80,995 GLA SF is currently still vacant.

Proposed Project

The proposed Project would demolish the total 161,990 SF Sears store (both occupied and vacant) and construct 183,615 SF of additional retail space, a 128,000 SF health club, and 312 medium density residential units. See **Table 2-1** for the Project development summary.

Vehicular access to the Project from the public streets bordering the subject property are currently provided by two (2) signalized intersections along Randolph Avenue, one (1) signalized intersection along Birch Street, and three (3) signalized intersections along State College Boulevard.

Figure 2-2 illustrates the conceptual site plan for the Project provided by Simon.

C. Traffic Study Locations: The following twenty-nine (29) key study intersections have been selected for evaluation and are subject to review and confirmation by the City of Brea. Twenty-three (23) key roadway segments volumes will be provided for informational purposes only. *Figure 1-1* identifies the study locations.

Key Intersection	Applicable Jurisdiction and/or City Location				
	Caltrans	City of Brea	City of La Habra	City of Fullerton	City of Placentia
1. Puente Street at Lambert Road	--	Brea	--	--	--
2. Brea Boulevard at Lambert Road	--	Brea	--	--	--
3. State College Boulevard at Lambert Road	--	Brea	--	--	--
4. SR-57 SB Ramps at Lambert Road	Caltrans	Brea	--	--	--
5. SR-57 NB Ramps at Lambert Road	Caltrans	Brea	--	--	--
6. Santa Fe Road/Kraemer Boulevard at Lambert Road	--	Brea	--	--	--
7. Brea Boulevard at Birch Street	--	Brea	--	--	--
8. Randolph Avenue at Birch Street	--	Brea	--	--	--
9. State College Boulevard at Birch Street	--	Brea	--	--	--
10. S Associated Road at Birch Street	--	Brea	--	--	--
11. N Associated Road at Birch Street	--	Brea	--	--	--
12. Kraemer Boulevard at Birch Street	--	Brea	--	--	--
13. Randolph Avenue at Madison Way	--	Brea	--	--	--
14. Randolph Avenue at Brea Mall South	--	Brea	--	--	--
15. Brea Mall South at State College Boulevard	--	Brea	--	--	--
16. Harbor Boulevard at Imperial Highway	Caltrans	--	La Habra	Fullerton	--
17. Puente Street at Imperial Highway	Caltrans	Brea	--	Fullerton	--
18. Brea Boulevard at Imperial Highway	Caltrans	Brea			
19. Randolph Avenue at Imperial Highway	Caltrans	Brea	--	--	--
20. State College Boulevard at Imperial Highway	Caltrans	Brea	--	--	--

Key Intersection	Applicable Jurisdiction and/or City Location				
	Caltrans	City of Brea	City of La Habra	City of Fullerton	City of Placentia
21. SR-57 SB Ramps at Imperial Highway	Caltrans	Brea	--	--	--

D. Traffic Counts: Weekday Daily, AM peak hour and PM peak hour traffic counts, and Weekend (Saturday) Daily and Midday peak hour traffic counts for the twenty-nine (29) key study intersections and twenty-three (23) key roadway segments were collected in 2018 and May and August 2019. The 2018 count locations will be grown by 1% for a baseline Year 2019 traffic condition.

E. Project Traffic Generation:

The trip generation potential of the proposed Project is recommended to be estimated using trip rates contained in the 10th Edition of *Trip Generation*, published by the Institute of Transportation Engineers (ITE), [Washington, D.C., 2017] and observed trip rates of existing Lifetime Fitness facilities. **Table 5-1** summarizes the trip generation rates used in forecasting the vehicular trips generated by the proposed Project and also presents the project's forecast peak hour and daily traffic volumes. As shown in the upper portion of *Table 5-1*, ITE Land Use 221: Multifamily Housing (Mid-Rise) trip rates and ITE Land Use 820: Shopping Center equations, and empirical rates from existing Lifetime Fitness facilities will be used to forecast the trip generation potential of a fully occupied existing Brea Mall and site, as well as the Project.

A review of the middle portion of *Table 5-1* indicates that a fully occupied Brea Mall (including the currently vacant second story of Sears) is forecast to generate approximately 30,817 Weekday daily trips, with 757 trips (469 inbound, 288 outbound) produced in the Weekday AM peak hour and 3,247 trips (1,559

inbound, 1,688 outbound) produced in the Weekday PM peak hour on a “typical” weekday. A fully occupied Brea Mall is forecast to generate 39,183 Saturday daily trips, with 4,204 trips (2,186 inbound, 2,018 outbound) produced in the Saturday Midday peak hour on a “typical” Saturday.

The lower portion of *Table 5-1* presents the trip generation associated with the existing occupied Brea Mall and the additional proposed Project uses. A review of lower portion of this table indicates that the proposed Project with the existing Brea Mall is forecast to generate approximately 34,957 Weekday daily trips, with 1,072 trips (634 inbound, 438 outbound) produced in the Weekday AM peak hour and 3,671 trips (1,840 inbound, 1,831 outbound) produced in the Weekday PM peak hour on a “typical” weekday. The proposed Project with the existing Brea Mall is forecast to generate 43,214 Saturday daily trips, with 4,645 trips (2,358 inbound, 2,287 outbound) produced in the Saturday Midday peak hour on a “typical” Saturday.

When the proposed Project is compared to an existing fully occupied Brea Mall site, the proposed Project is forecast to generate 4,140 more Weekday daily trips, 315 more Weekday AM peak hour trips, 424 more Weekday PM peak hour trips, 4,031 more Saturday daily trips, and 441 more Saturday Midday peak hour trips.

F. Project Trip Distribution Pattern: See attached *Figures 5-1* and *5-2* for the Project Trip Distribution for the commercial and residential components, respectively, for review by the City. The Project Trip Distribution for the retail and residential components have been distributed and assigned to the adjacent street system based on Project Select Zone model runs and have been further refined based on the following considerations:

- location of site access points in relation to the surrounding street system,
- the site's proximity to major traffic carriers and regional access routes,
- physical characteristics of the circulation system such as lane channelization and presence of traffic signals that affect travel patterns,
- presence of traffic congestion in the surrounding vicinity, and
- ingress/egress availability at the project site.

G. Near-Term Cumulative Background Traffic:

- Project Completion Year: The Project is expected to be completed by 2022.
- Ambient Growth Rate: 1% per year
- Cumulative Projects: Planned and/or approved projects within a two-mile radius and in the vicinity of the Project site that may contribute traffic to the Project study area have been researched at the City of Brea and adjacent jurisdictions (i.e. Fullerton, La Habra, Placentia). Currently, six (6) projects,

inclusive of the Brea Plaza Expansion project, are proposed for inclusion in the near-term cumulative traffic assessment. **Table 6-1** shows the six (6) cumulative projects that will be included in the analysis. **Figure 6-1** shows the six (6) cumulative project locations. Related projects will be reconfirmed with the above-mentioned cities.

Per the direction of City staff the Brea 265 Project has been included as a related project as part of Year 2040 background traffic conditions.

H. Long-Term Buildout Traffic: Long-Term traffic volume forecasts will be developed based on OCTA prepared models. Contact OCTA and formally request preparation of OCTAM 4.0 approved computer traffic model runs for baseline conditions and buildout conditions for the AM and PM peak periods and daily traffic conditions.

Forecast future buildout traffic volumes using the following methodology:

- a. Peak period traffic volumes will be converted to peak hour (i.e., one-hour) traffic volumes using a conversion factor of 0.3566 for the AM peak hour and 0.2662 for the PM peak hour;
- b. Calculate the difference between the baseline and buildout peak period traffic volumes and convert to AM and PM peak hour (i.e., one-hour) link traffic volumes;
- c. Link traffic volumes (i.e., two-way directional traffic volumes on each roadway segment) will be post-processed using the “b-turns” program and the relationship of the base year validation model run output to the base year "ground" traffic counts to develop buildout AM and PM peak hour traffic volumes.

Per the direction of City staff, the Brea 265 Specific Plan project will be included as a related project as part of Year 2040 background traffic conditions.

I. Analysis Scenarios: Prepare AM peak hour and PM peak hour Level of Service (LOS) calculations at up to twenty-nine (29) study intersections to determine the potential impacts of the proposed Project. The following traffic scenarios will be prepared.

1. Existing Baseline (Existing + Fully Occupied Mall) Traffic Conditions;
2. Existing Baseline (Existing + Fully Occupied Mall) Plus Project Traffic Conditions;
3. Scenario (2) with Mitigation, if necessary;
4. Near-Term (Year 2022 to be confirmed) Background Traffic Conditions (Existing plus Ambient Growth plus Related Projects);

5. Near-Term (Year 2022 to be confirmed) Background Plus Project Traffic Conditions;
6. Scenario (5) with Mitigation, if necessary;
7. Long-Term Buildout Traffic Conditions;
8. Long-Term Buildout Plus Project Traffic Conditions; and
9. Scenario (8) with Mitigation, if necessary.

For the City of Brea, Fullerton and Caltrans intersections the LOS calculations will be based on the most current version of the Highway Capacity Manual (HCM 6th Edition) methodology. For the City of Brea and Placentia the Intersection Capacity Utilization (ICU) methodology for signalized intersections. All HCM analysis will be completed via Vistro 7.6.

J. Impact Criteria and Thresholds: The following impact criteria will be applied for each jurisdiction.

City of Brea

For the City of Brea under HCM methodology analysis, a significant LOS impact occurs when the proposed Project causes the level of service at an intersection to fall below LOS D with the addition of Project traffic to baseline conditions. For intersections that already operate at unacceptable LOS E or F under the baseline conditions, a significant impact is defined as the proposed Project causing an increase in average critical delay value by 2.0 seconds or more. This significant impact criteria would only apply to those intersections located within the City of Brea and under its sole jurisdiction. At locations within the City of Brea but under the jurisdiction of Caltrans (i.e. study locations located along Imperial (SR-90) Highway), Caltrans LOS standards and impact criteria would apply.

For the City of Brea under ICU methodology analysis, an impact is considered to be significant if the Project causes an intersection at LOS D or better to degrade to LOS E or F, or if the Project increases traffic demand at a signalized study intersection by 0.020 or greater and the intersection is forecast to operate at LOS E or F.

City of La Habra

For ICU analysis, LOS D is the acceptable condition that should be maintained during the morning and evening peak commute hours on all intersections within the City of La Habra, except those on the CMPHS of Orange County, where LOS E is defined in the CMP for Orange County as the acceptable limit and is acceptable for State Highway intersections. An impact is considered to be significant if the Project causes an intersection to degrade to LOS E or F, or if the Project increases traffic demand at a signalized study intersection by 0.010 or greater and the intersection is forecast to operate at LOS E or F.

City of Placentia

The City of Placentia considers LOS D (ICU = 0.81 – 0.90) to be the minimum acceptable LOS for all key study intersections. Impacts to local and regional transportation systems are considered significant if:

- The intersection operates at LOS E or F and the project increases traffic demand at the study intersection by 1% of capacity (ICU increase ≥ 0.010). At unsignalized intersections, a “significant” adverse traffic impact is defined as a project that adds 1% or more traffic delay (seconds per vehicle) at an intersection operating at LOS E or F.

City of Fullerton

According to the City of Fullerton, LOS D is the minimum acceptable condition that should be maintained during the peak commute hours. Impacts are considered significant if:

- For signalized intersections, an impact is considered to be significant if the project causes an intersection at LOS D or better to degrade to LOS E or F.

Caltrans

Consistent with the *Caltrans Guide for the Preparation of Traffic Impact Studies*, the following criteria has been utilized to determine project impacts at the state-controlled study intersections:

- Caltrans endeavors to maintain a target LOS at the transition between LOS “C” and LOS “D” on State highway facilities. However, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. Caltrans has established that LOS D is the operating standard for all Caltrans facilities. Caltrans has determined that all state-owned facilities that operate below LOS D should be identified and improved to an acceptable LOS. The *Caltrans Traffic Impact Study Guidelines dated December 2002* states that if an existing State-owned facility operates at less than the target LOS (i.e. LOS D); the existing service level should be maintained.

J. Caltrans Facilities Analysis:

- Conduct freeway mainline analysis as outlined in Caltrans’ requirements for the following six (6) segments:
 - 1) SR-57 Northbound, south of Imperial Highway
 - 2) SR-57 Northbound, south of Lambert Road
 - 3) SR-57 Northbound, north of Lambert Road

- 4) SR-57 Southbound, north of Lambert Road
 - 5) SR-57 Southbound, south of Lambert Road
 - 6) SR-57 Southbound, south of Imperial Highway
- Conduct freeway merge/diverge analysis as outlined in Caltrans' requirements for the following four (4) segments:
 - 1) SR-57 Northbound Off-Ramp *to* Imperial Highway
 - 2) SR-57 Northbound Loop On-Ramp *from* Imperial Highway
 - 3) SR-57 Northbound Slip On-Ramp *from* Imperial Highway
 - 4) SR-57 Northbound Off-Ramp *to* Lambert Road
 - 5) SR-57 Northbound On-Ramp *from* Lambert Road
 - 6) SR-57 Southbound Off-Ramp *to* Lambert Road
 - 7) SR-57 Southbound On-Ramp *from* Lambert Road
 - 8) SR-57 Southbound Off-Ramp *to* Imperial Highway
 - 9) SR-57 Southbound Loop On-Ramp *from* Imperial Highway
 - 10) SR-57 Southbound Slip On-Ramp *from* Imperial Highway

K. Other Issues:

- Conduct a Synchro assessment at the two Project Driveways located closest to Imperial Highway along State College Boulevard and Randolph Avenue to assess if the stacking requirements with the proposed Project are adequate. It is our understanding the City and Caltrans would like to ensure that Randolph Avenue does not queue back from the Project Driveway onto Imperial Highway. As it relates to State College it is our understanding the City and/or Caltrans are concerned with how the southbound dual lefts will interact with the freeway on-ramp. In addition, conduct Synchro assessment for the SR-57 Ramps intersections at Lambert Road and Imperial Highway to document existing and future queuing at the ramp intersections.
- VMT analysis.
- Evaluate Site Access and Internal Circulation of the proposed expansion and improvement area of the Brea Mall.
- Identify measures to mitigate the impact of project traffic including roadway and intersection widening, traffic signals installation & modification signing, localized street improvement striping/channelization and all others improvements to provide acceptable LOS.
- Research planned improvements along the SR-57 Freeway within the vicinity of the Project. In addition, research SR-57 Ramp improvements at Imperial Highway and/or Lambert Road.

- Work with the City and/or Caltrans to obtain five years of accident history data at the intersections of Randolph Avenue/Imperial Highway and State College Boulevard/Imperial Highway to see if improvements could be made to correct avoidable collisions.
- Discuss existing bike facilities and transit service within Project vicinity, inclusive of those that current exists and/or are proposed within the Brea Mall. Given the Brea Mall is a key destination and transfer location for transit users, discussion current service/routes to and from the site, and operational characteristics, inclusive of potential benefits and/or challenges created by the Project.

We appreciate the opportunity to provide this scope of work. Should you have any questions, please call us at (949)825-6175. Thank you.

Notes:
TE/TSF GLA = Trip End per Thousand Square Feet Gross Leasable Area
TE/DU = Trip End per Dwelling Unit

⁵ Source: *Trip Generation*, 10th Edition, Institute of Transportation Engineers (ITE), Washington, D.C. (2017).
⁶ Mid-Rise Multifamily Housing consists of buildings that are between 3 and 10 levels.
⁷ Trip Generation rates based on the following equations:
▪ Weekday Daily: $\text{Ln}(T) = 0.68\text{Ln}(X) + 5.57$
▪ Weekday AM Peak Hour: $T = 0.50(X) + 151.78$
▪ Weekday PM Peak Hour: $\text{Ln}(T) = 0.74\text{Ln}(X) + 2.89$
▪ Saturday Daily: $\text{Ln}(T) = 0.62\text{Ln}(X) + 6.24$
▪ Saturday Peak Hour of Generator: $\text{Ln}(T) = 0.79\text{Ln}(X) + 2.79$
⁸ Source: *Northshore Mall Redevelopment Traffic Impact and Access Study Appendix Table A-2*, prepared by VHB, dated April 2018. Based on trip rates from empirical count data collected by VHB at Life Time Fitness facilities in Westwood and Framingham, Massachusetts.
⁹ The pass-by trip reductions applied to retail trips are 10% for Weekday Daily, 5% for Weekday AM peak hour, 10% for Weekday PM peak hour, 10% for Saturday Daily, and 10% for Saturday Midday peak hour.
¹⁰ The fully occupied Brea Mall includes the existing 1,210,438 SF of occupied mall and 80,995 SF of second floor Sears vacancy.
¹¹ The proposed Brea Mall includes the existing 1,210,438 SF of occupied mall, 80,995 SF of the occupied first floor of the Sears building to be demolished, and 183,615 SF of additional commercial.
¹² Consistent with the *Trip Generation Handbook*, published by ITE (2017), Project trip generation was adjusted to account for internal capture between the retail and residential components of the Project. As there is no Saturday internal capture worksheets available, Weekday Daily and Weekday PM peak hour calculations have been applied to Saturday Daily and Saturday Midday peak hour.
